PETEY THE SOFTWARE TESTER

ST SZOFTVERTESZTER.hu

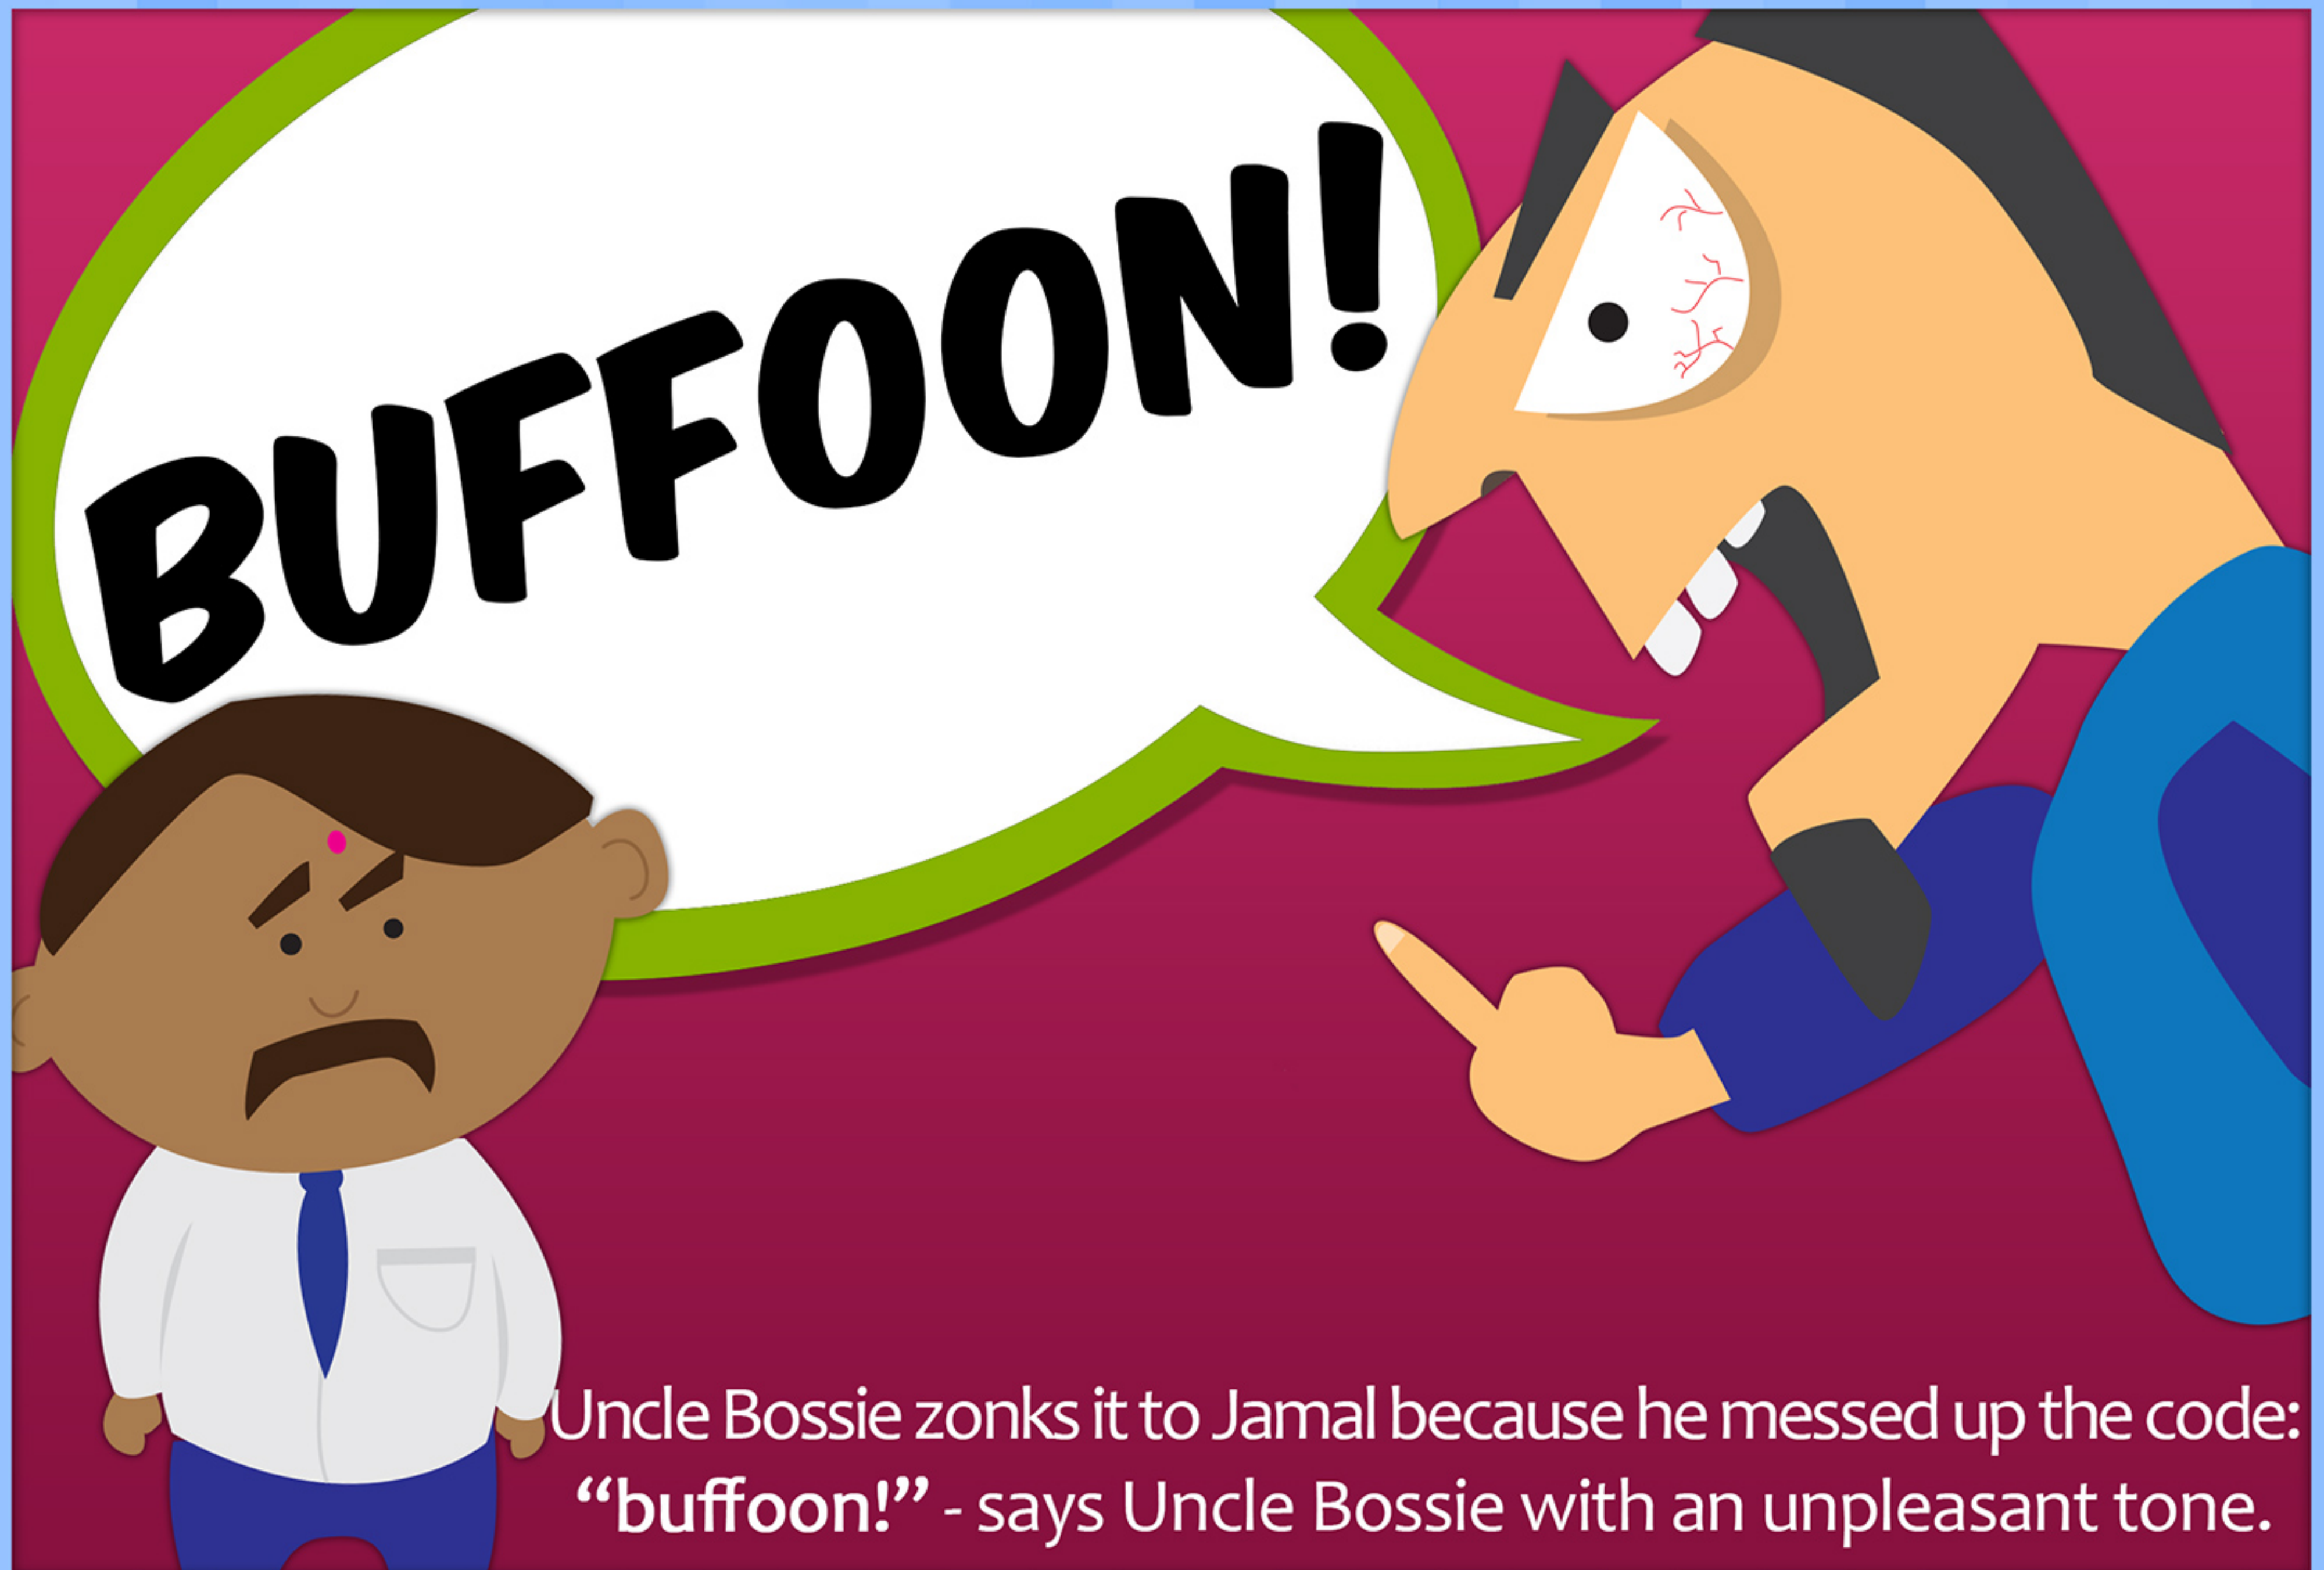

CHAPTER 1

PETHEY THE AGILE SOFTWARE TESTER

Petey is playing with Kitty the cat on the SCRUM meeting.
Kitty is a tabby little cat.

Uncle Bossie zonks it to Jamal because he messed up the code:
“buffoon!” - says Uncle Bossie with an unpleasant tone.

Look, poor Jamal is sad! Petey feels pity for him, verily!

Petey connects to the remote desktop through the VPN.
Such a skillful boy he is!

FORGOTTEN PASSWORD!

ARACHNIDS!

ALIENS!

AL-QUAIDA!

TERRORISM!

INCONTINENCY!

GONORRHEA!

WOMEN!

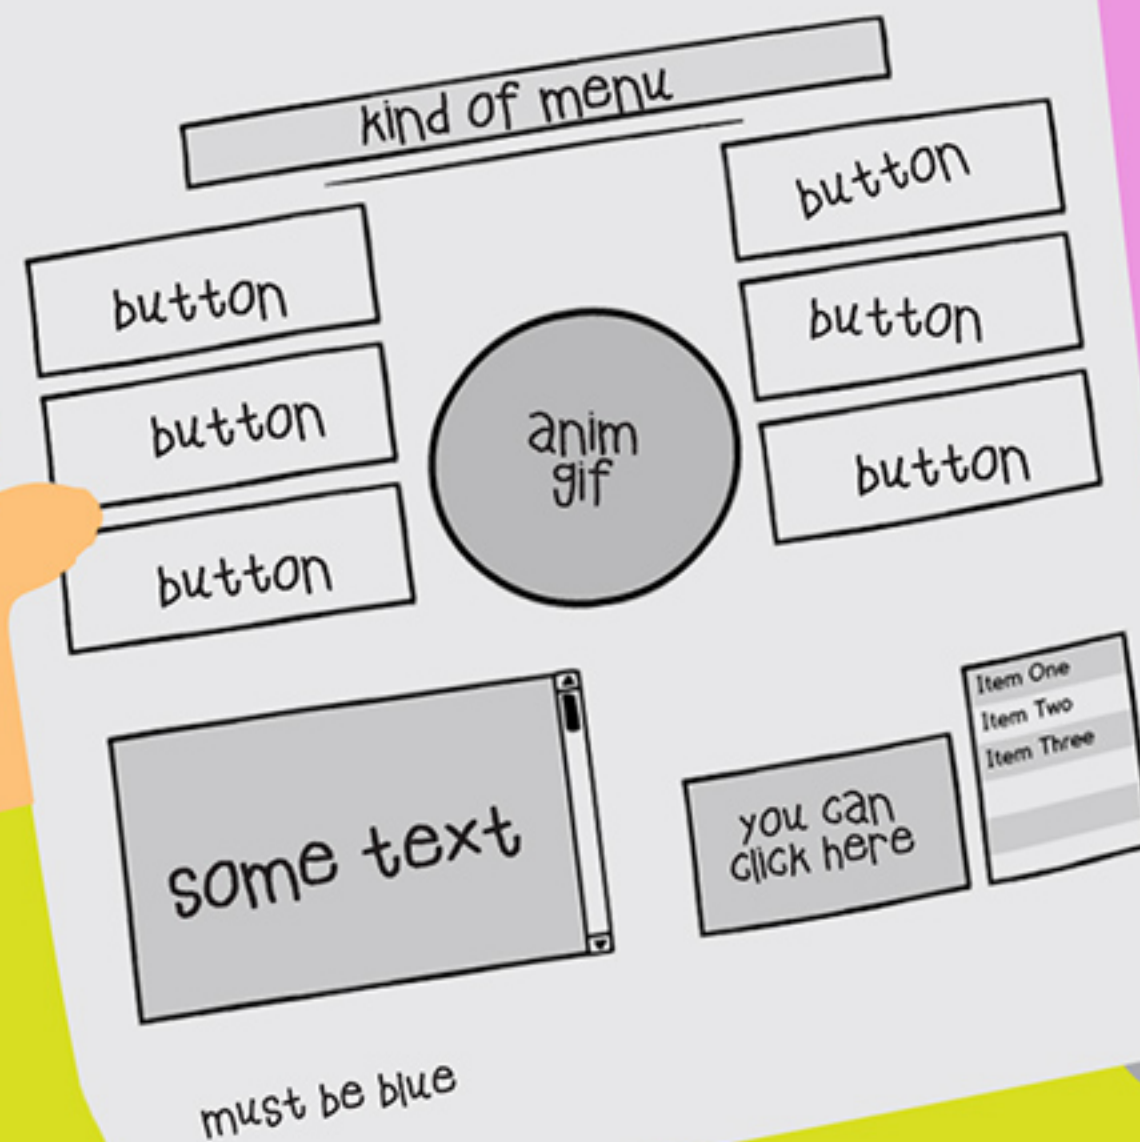

PUTYIN!

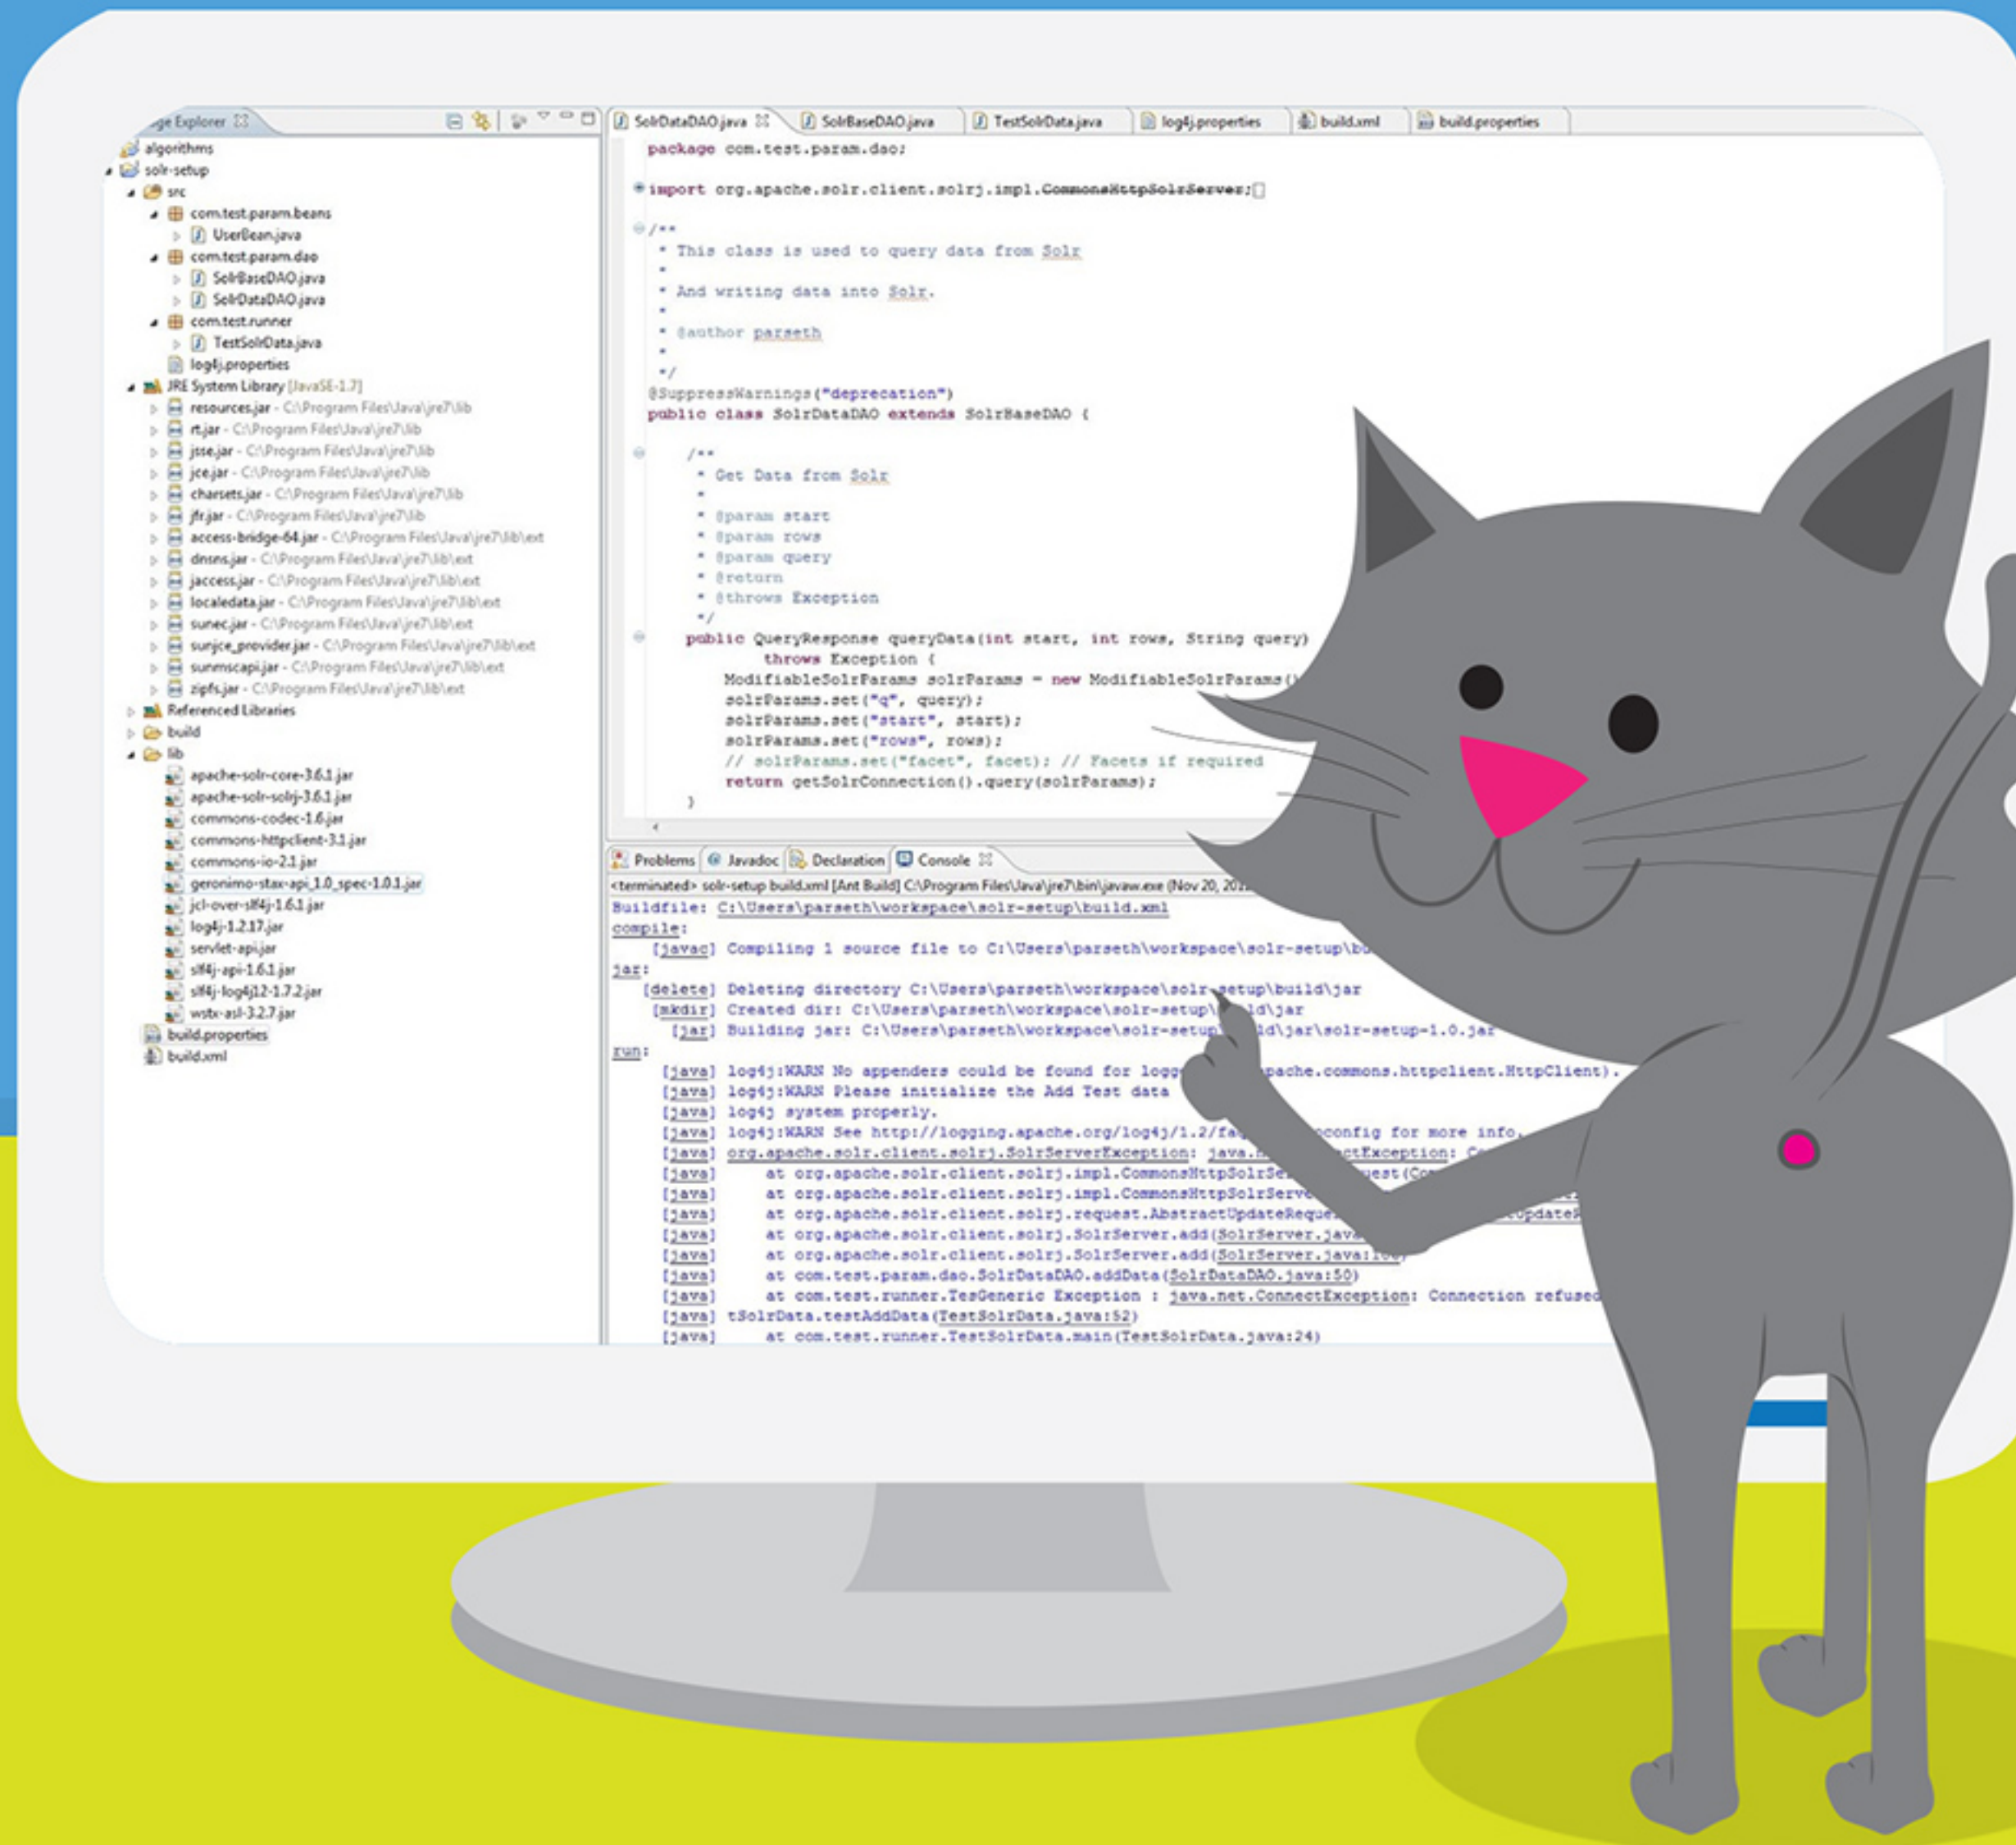

Petey enters an invalid password so he takes alarm!
A lot of startling things come to Petey's mind!

Hello world.

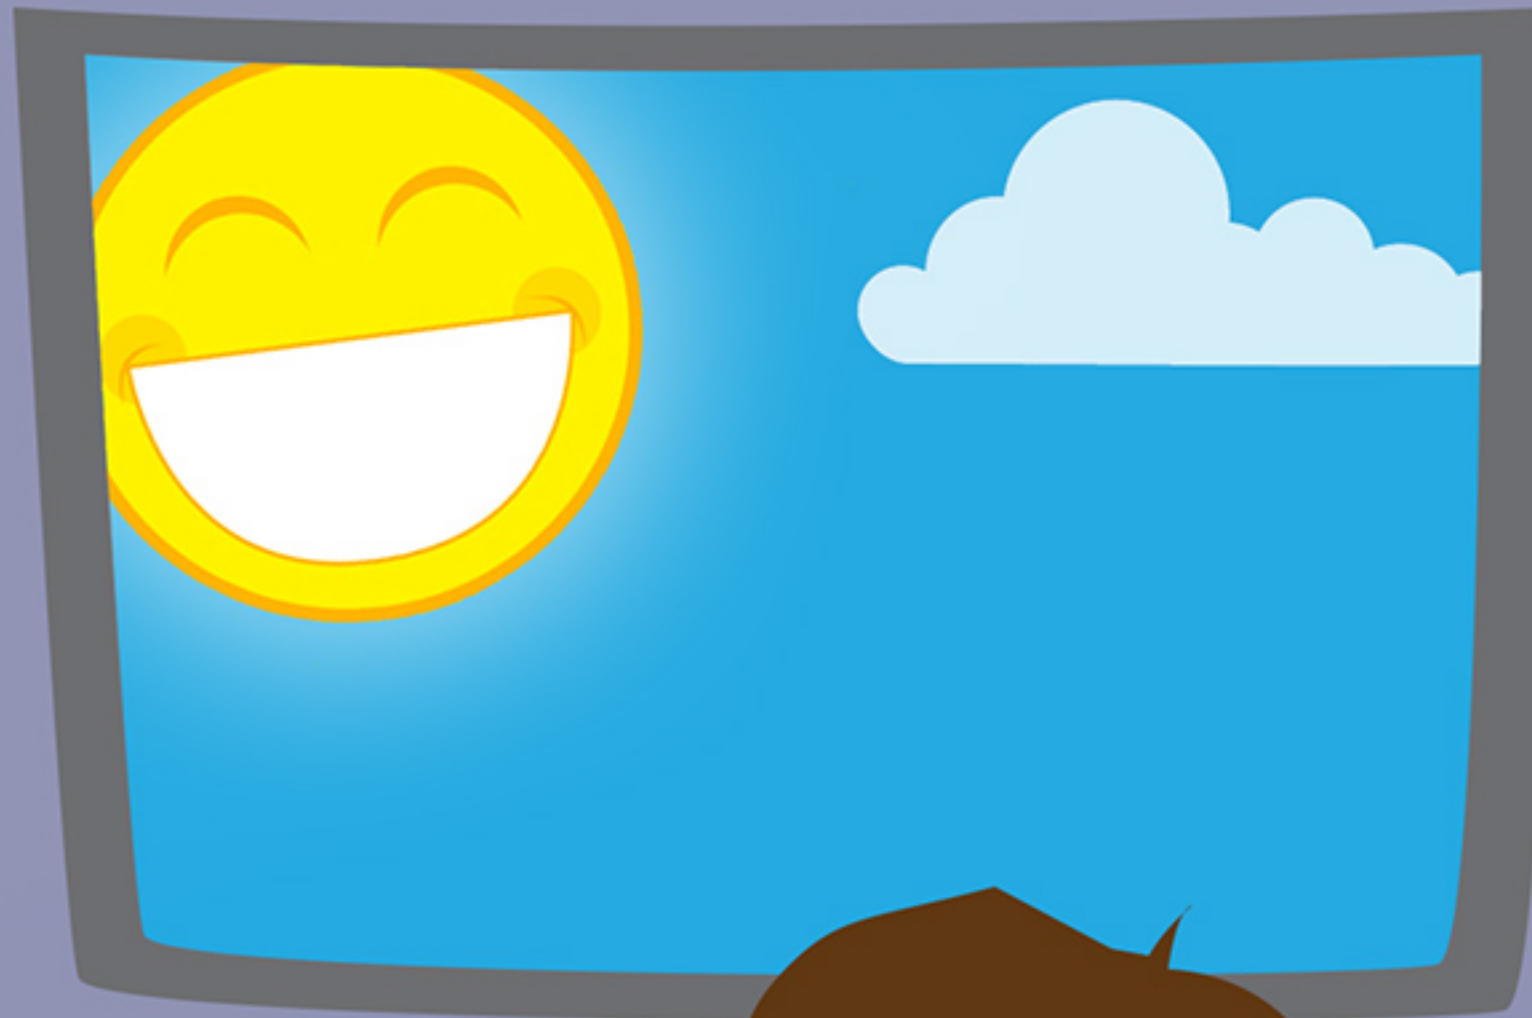

Functional Specification

Petey deciphers the right password and begins with the specification review. Petey is such an agile tester!

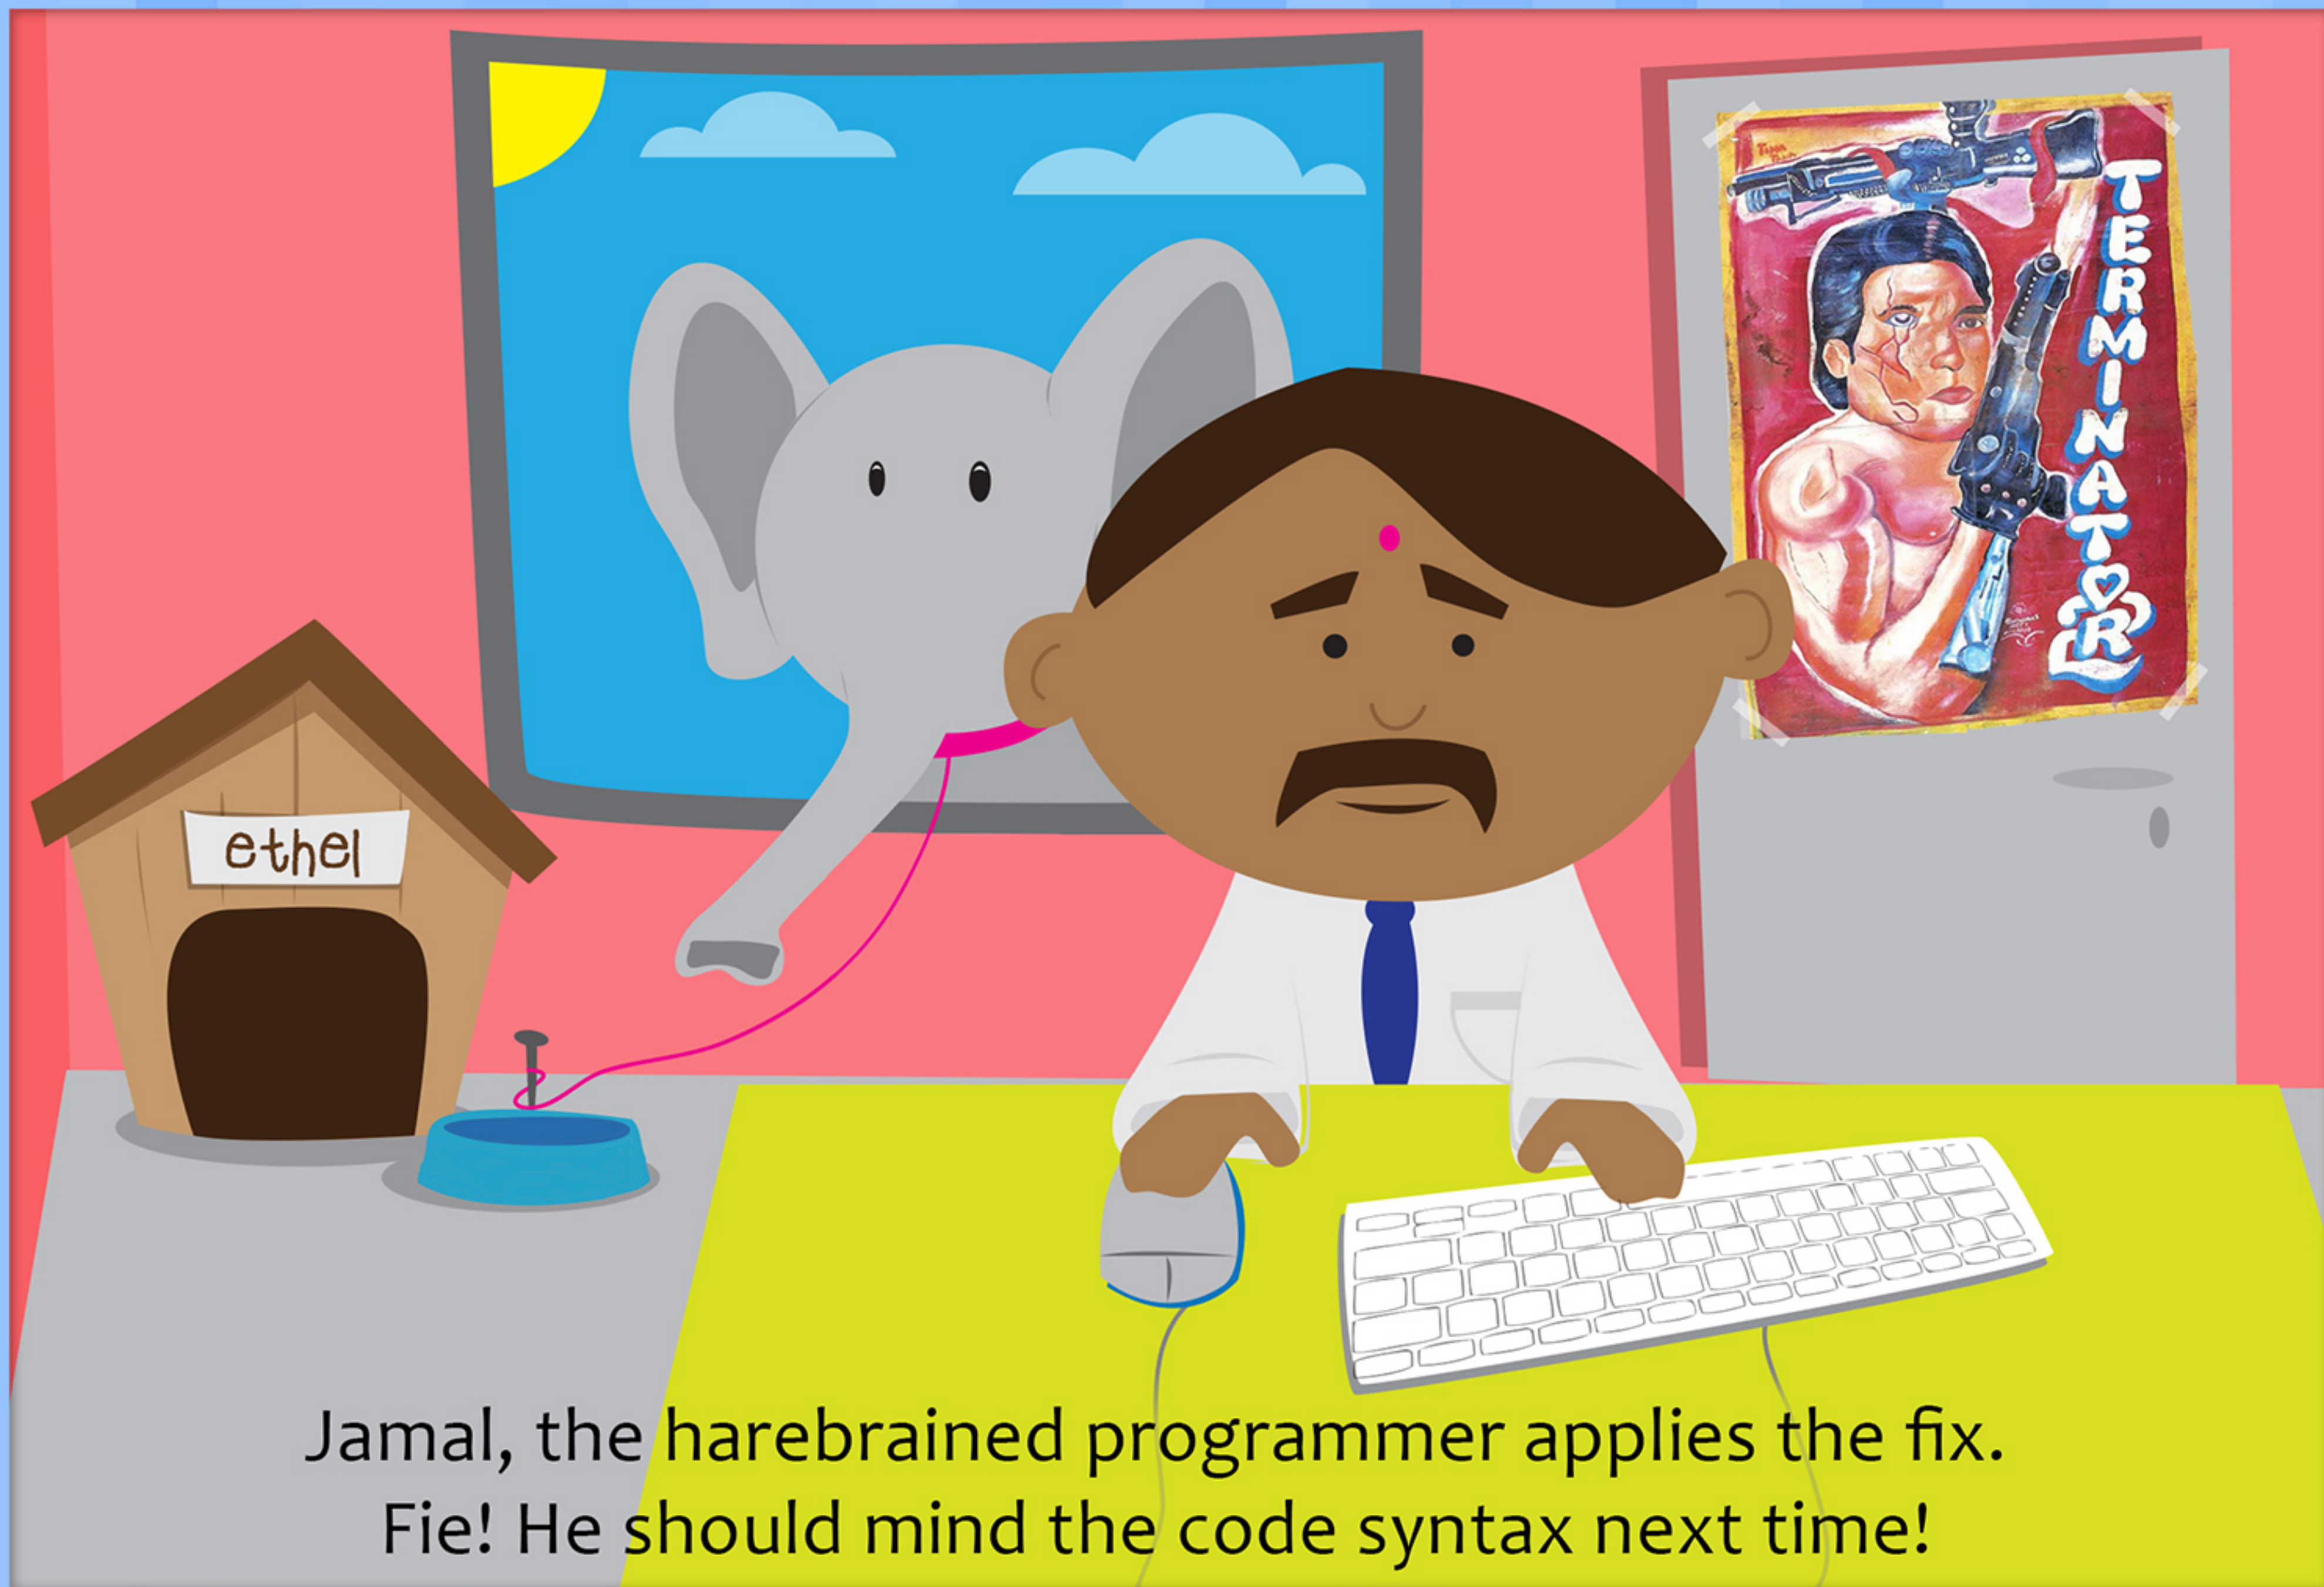

But can you guess who applied the code analysis successfully?
It was Kitty the cat for sure!

Is This Good for the
COMPANY?

Petey happily records the error ticket in Bugzilla.
The sun jumps for joy too!

Jamal, the harebrained programmer applies the fix.
Fie! He should mind the code syntax next time!

Hooray, the regression test passed!
Petey, Jamal, Uncle Bossie and Kitty the cat celebrate together.

CHAPTER 2

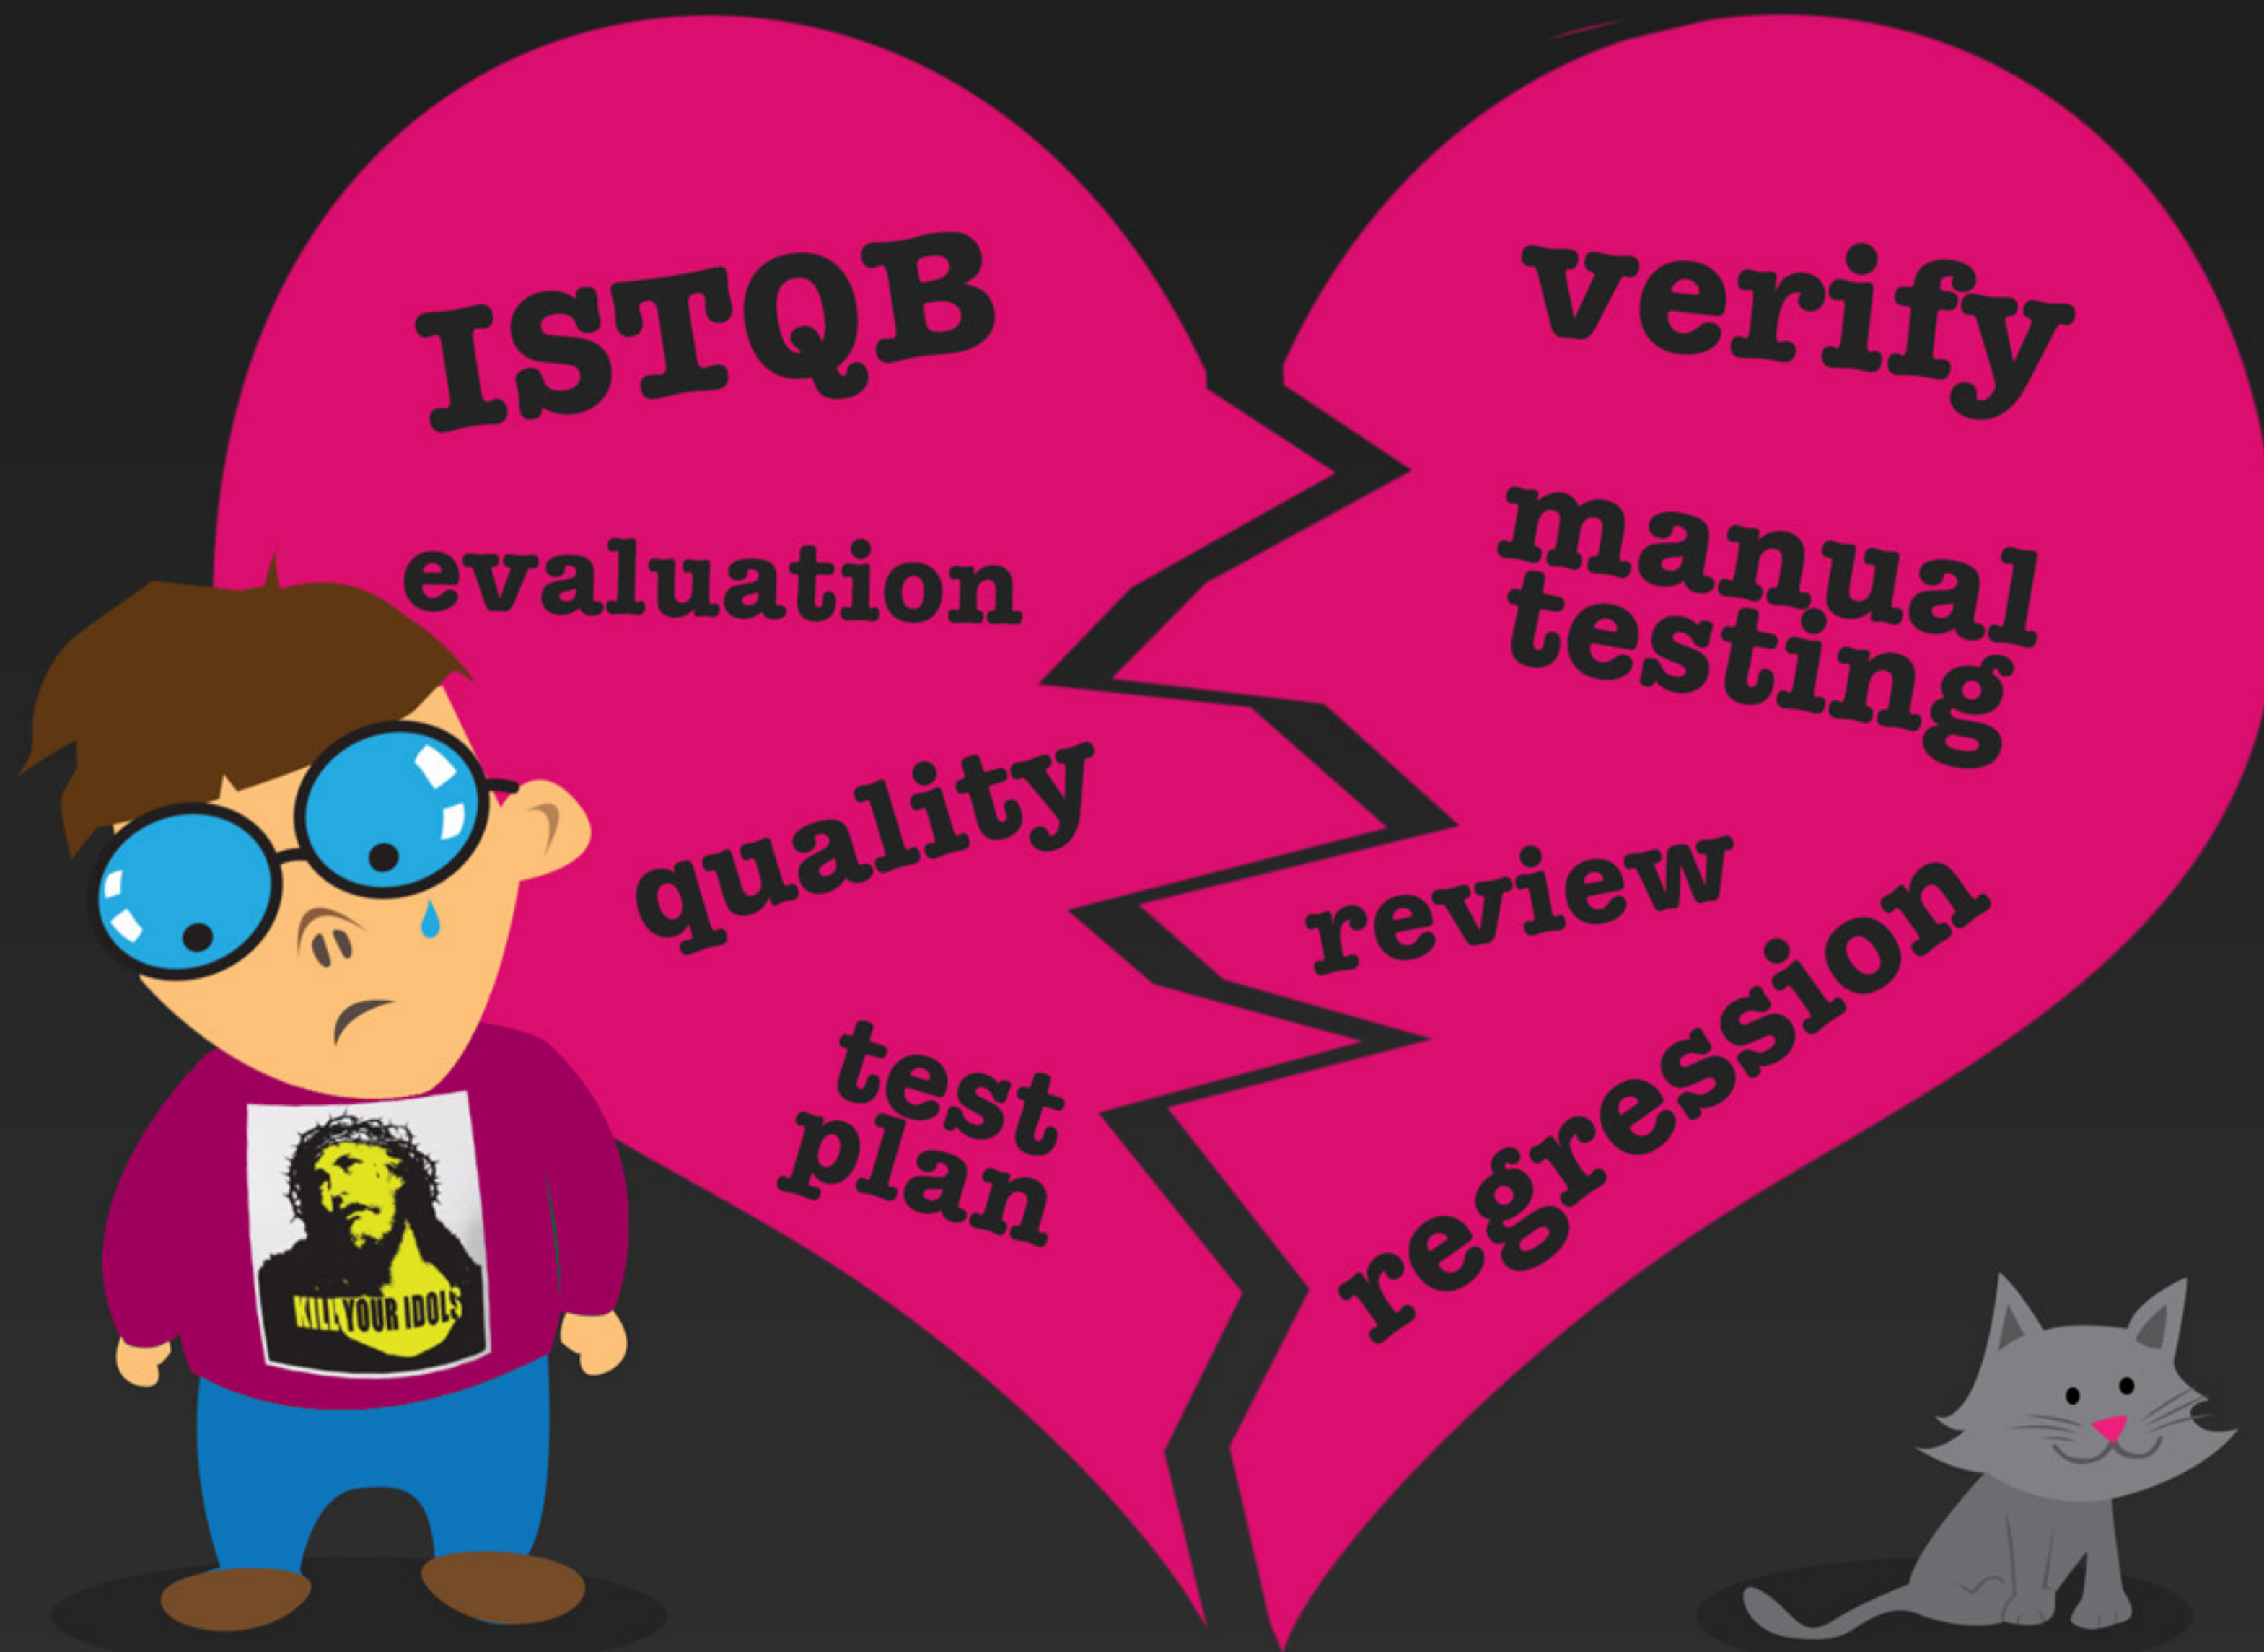

PETHEY THE TEST AUTOMATION ENGINEER
IN LOVE

"Yay, it's monday morning again!"
- whooped Petey happily as he put the alarm clock out.

Julie, the maid was sweeping the corridor.
“What a beautiful girl!” - thought the flushed Petey to himself.

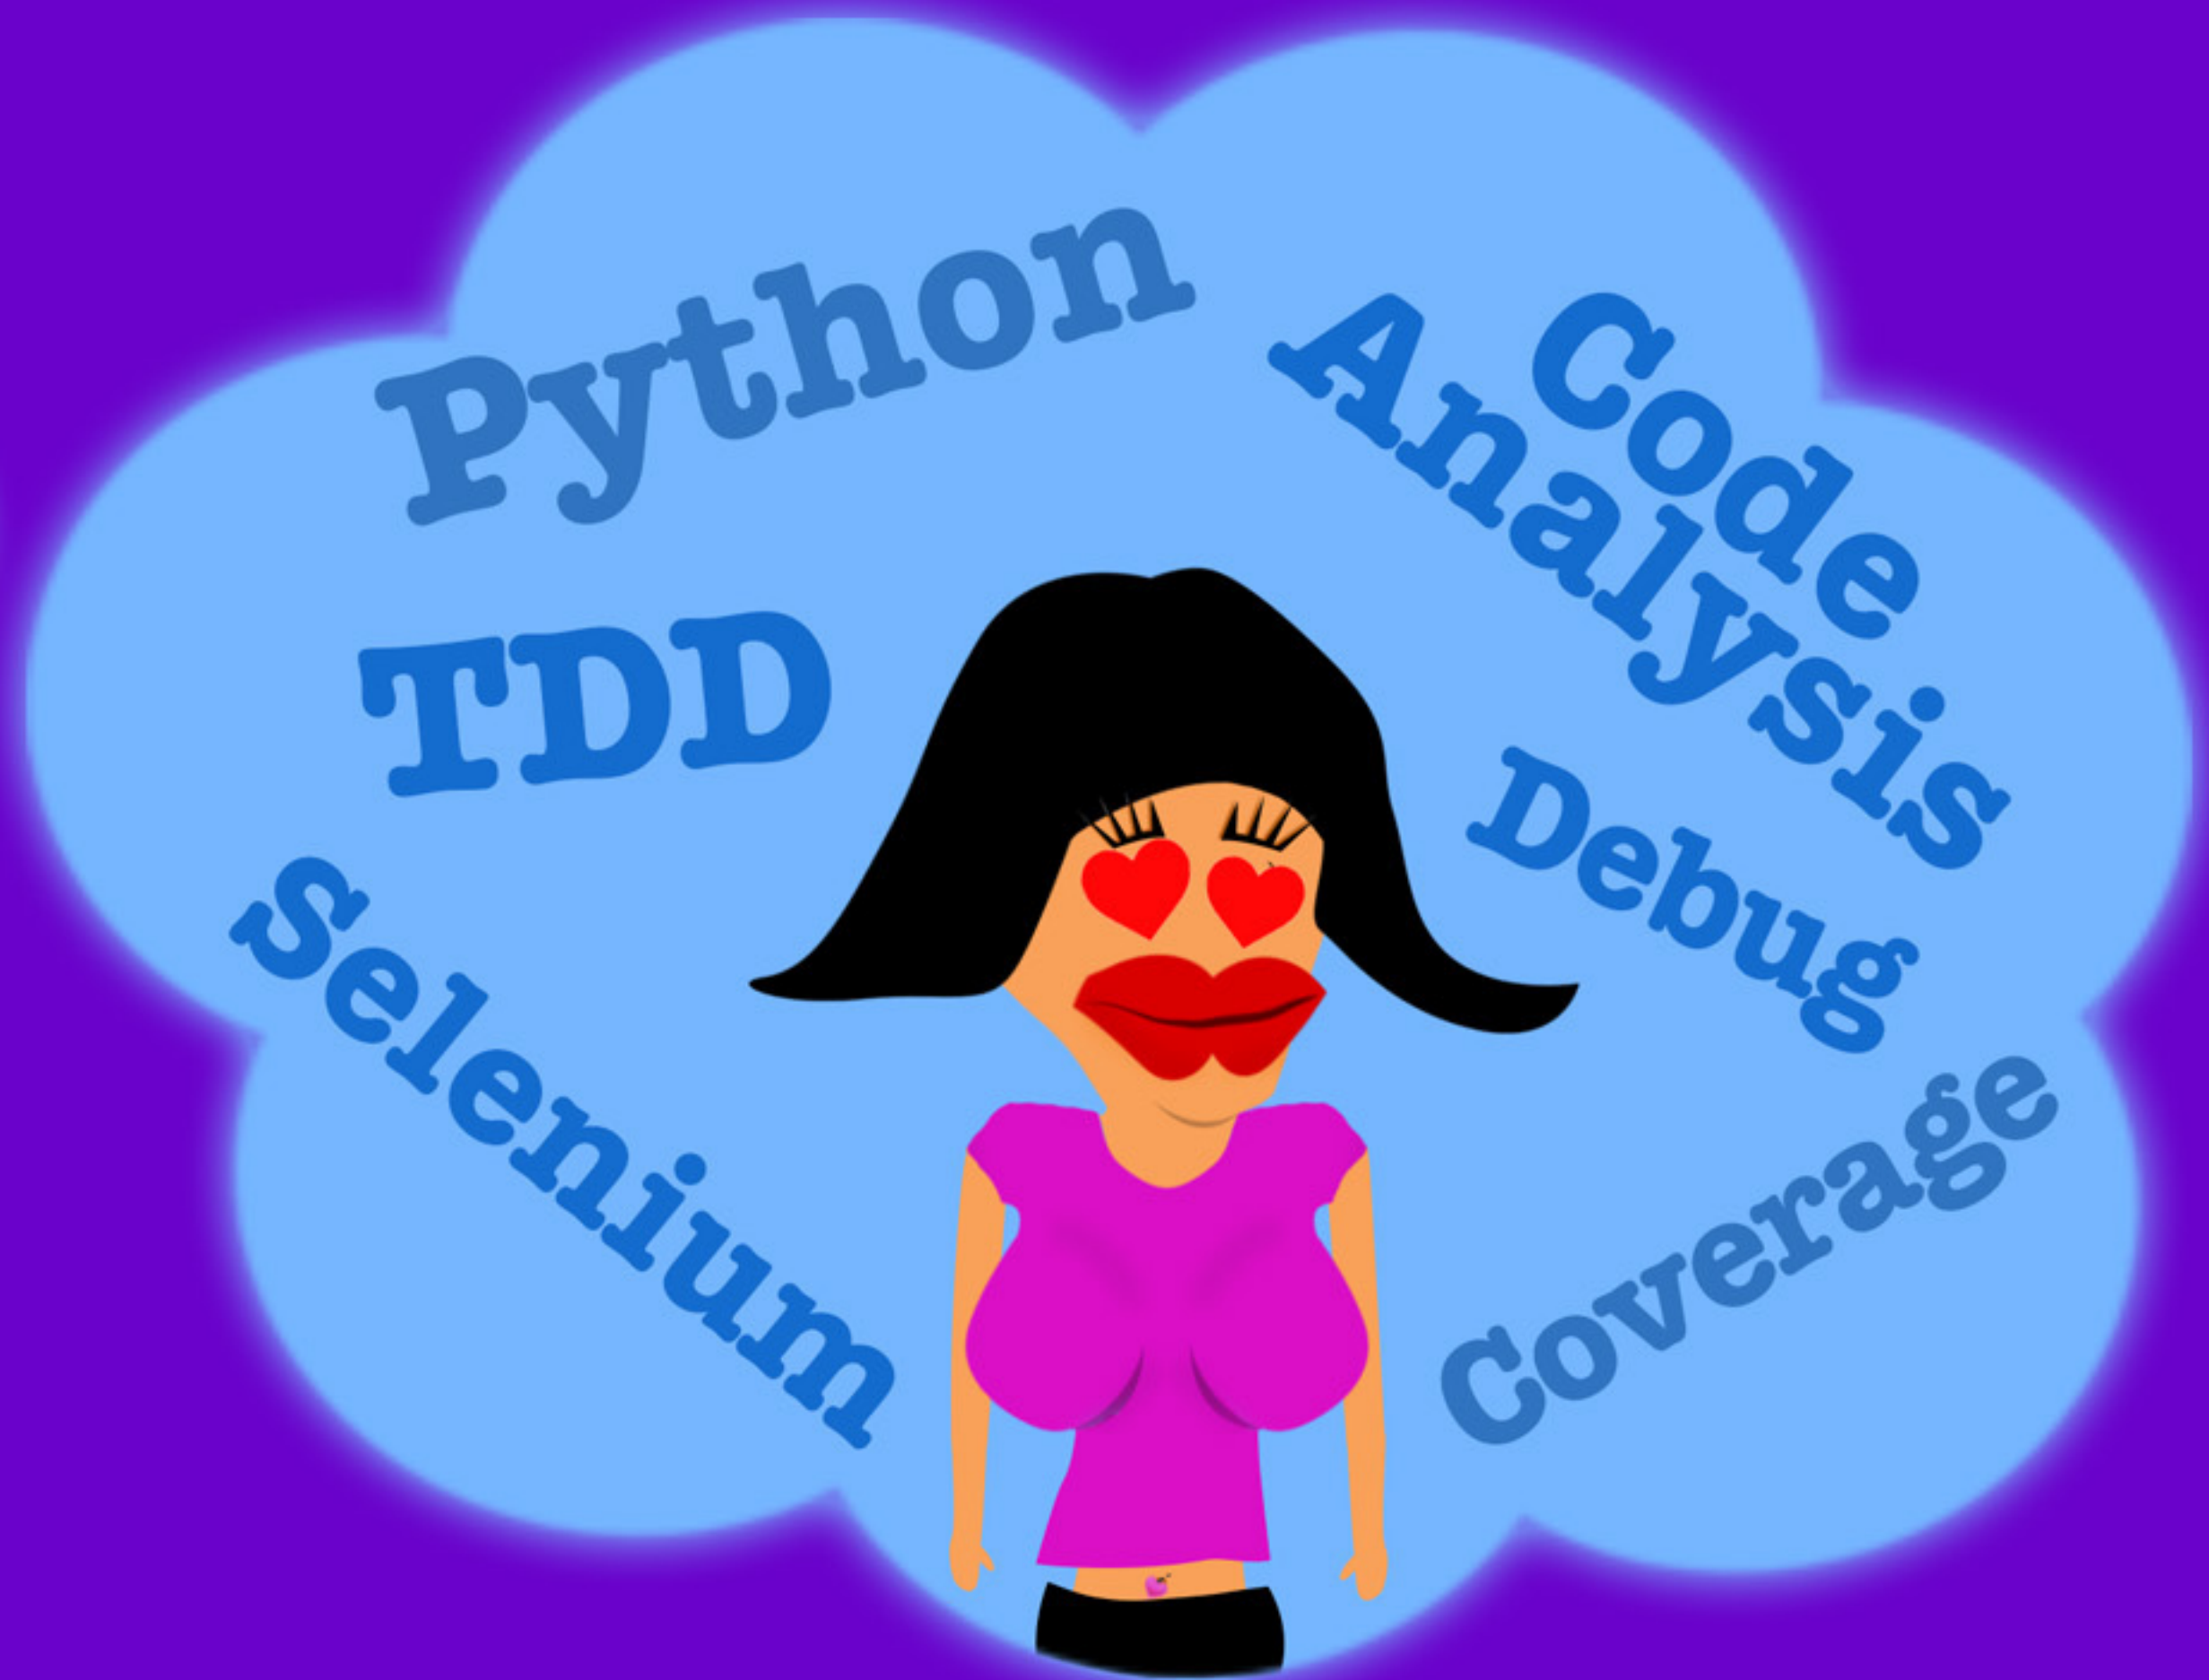

“A girl like her would never chat up with a plain tester...”
- conceived Petey. And he was right, yes he was.

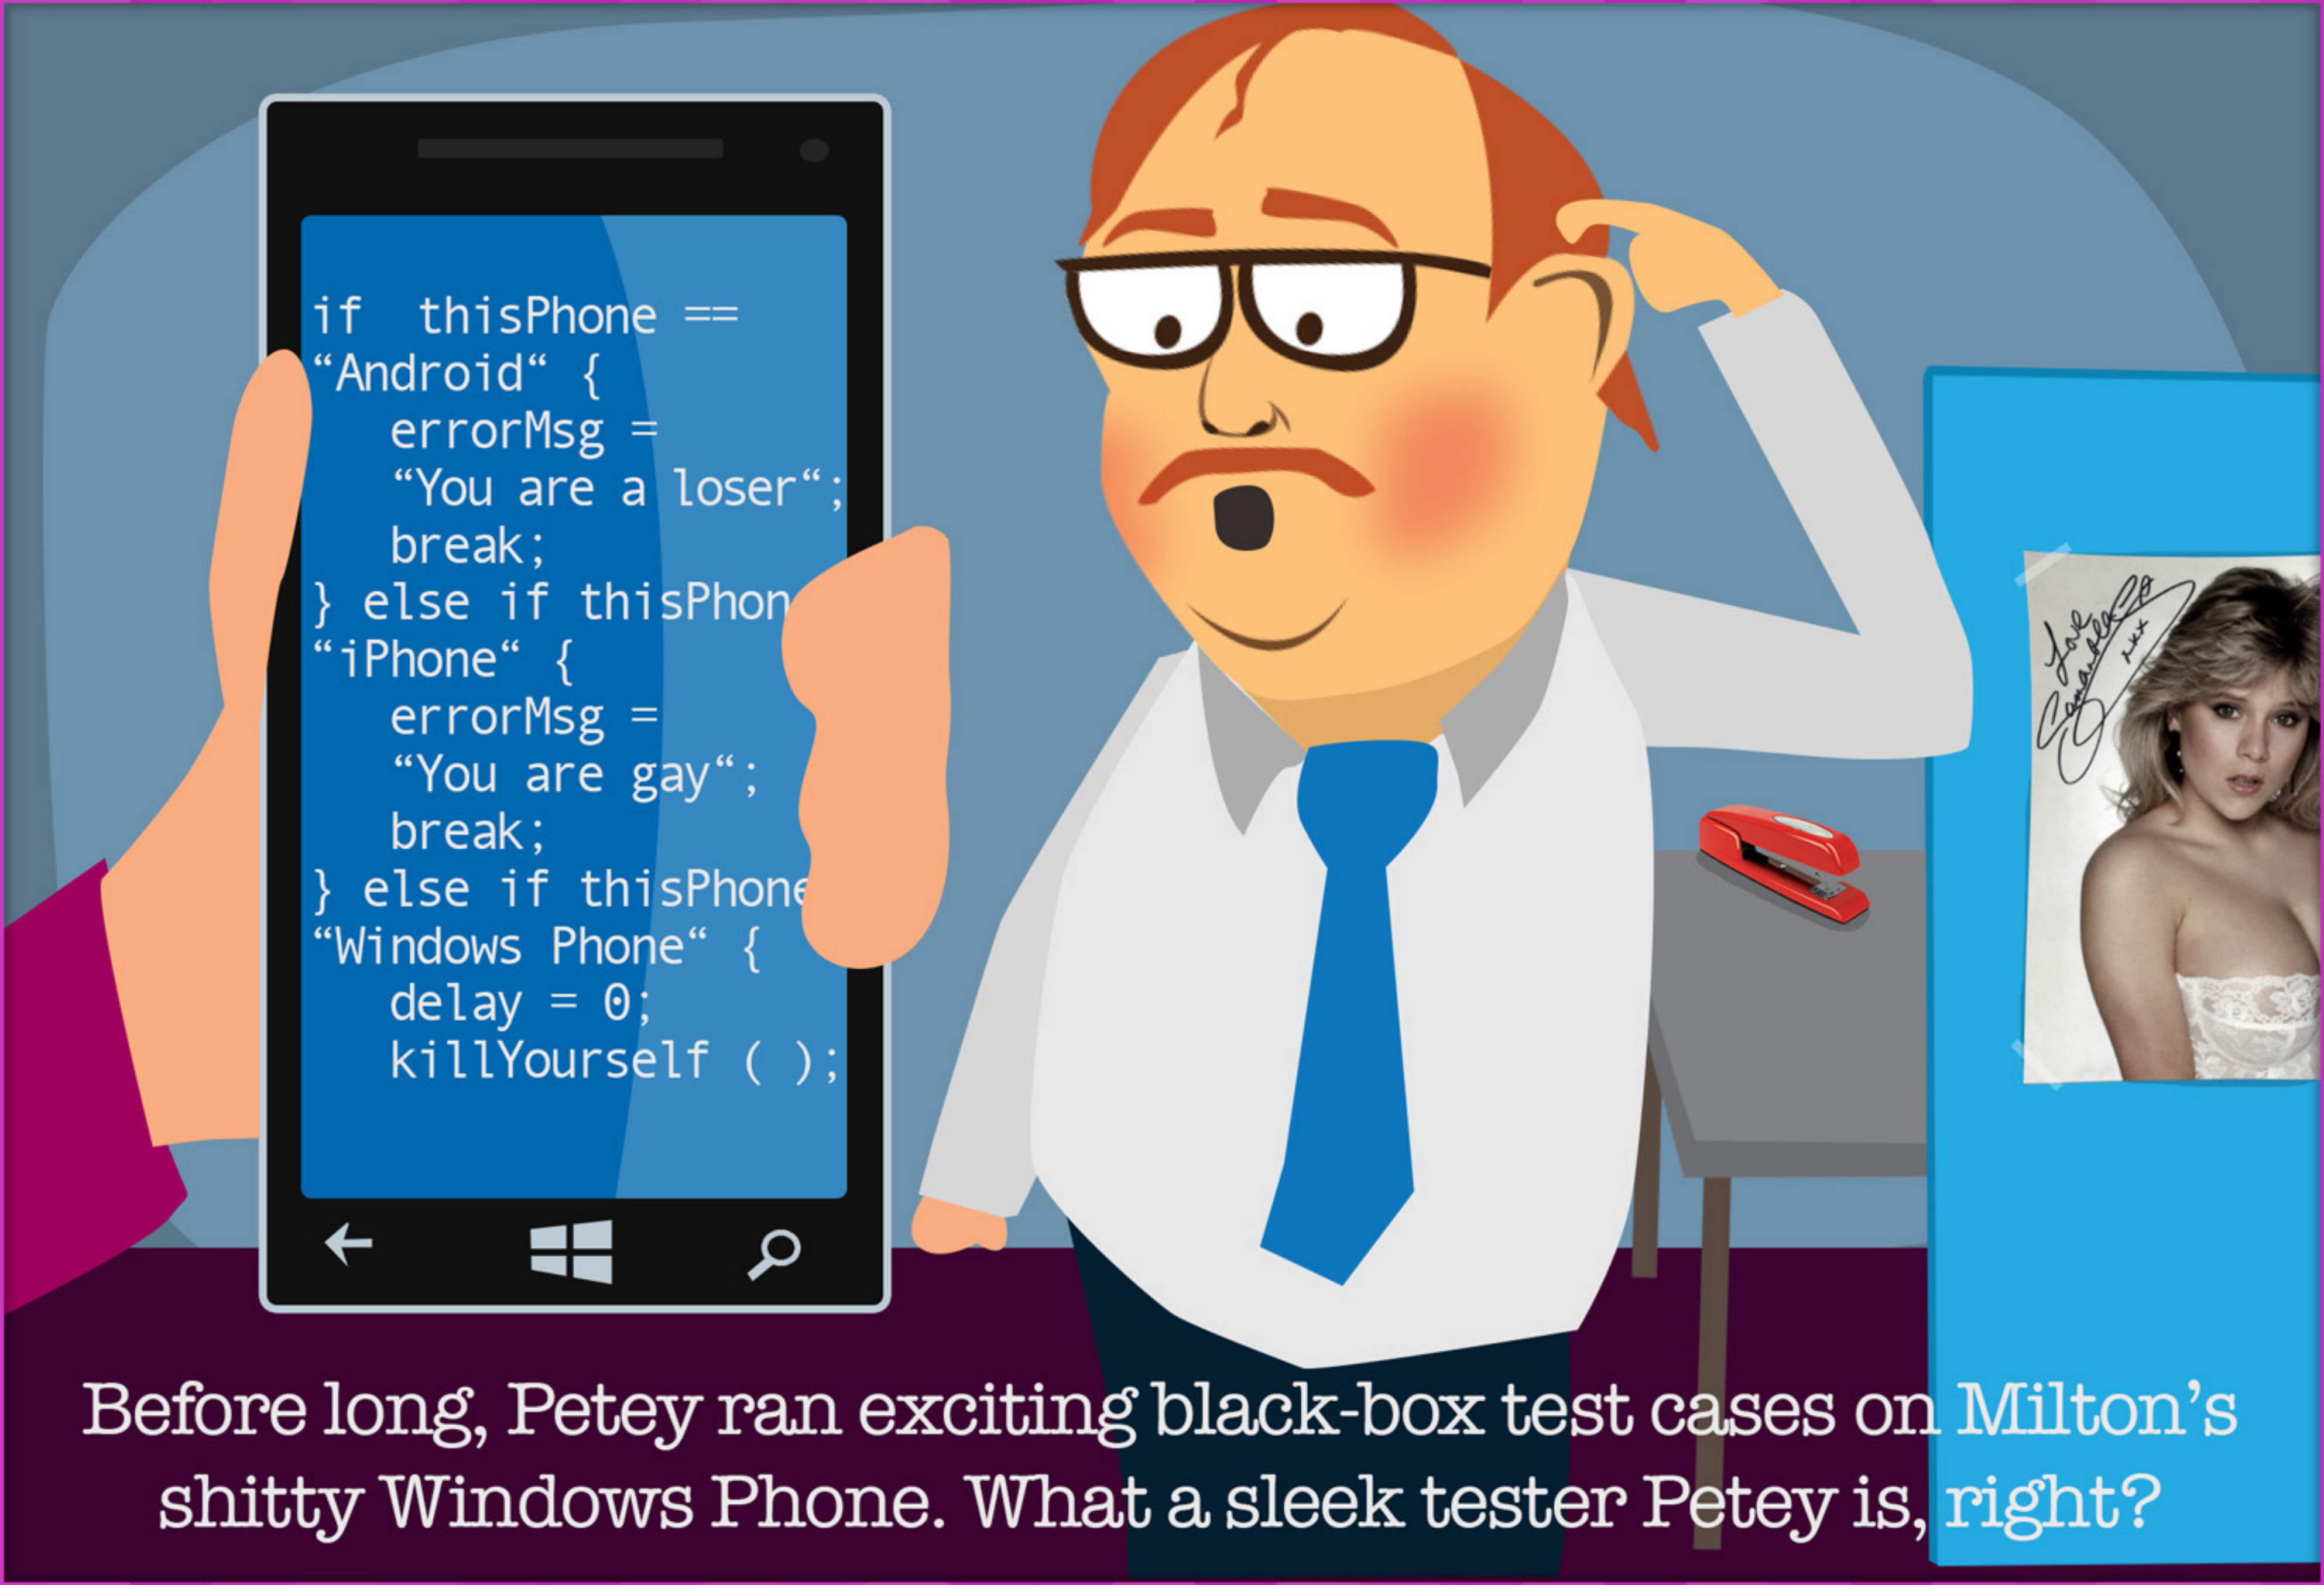

"Heureka!"

"I'm going to be a test automation engineer!"
- whooped Petey gleefully. With an ace job
he would conquer Julie's heart he thought.

Petey studied automation tools all day and all night. He even forgot to feed his kitten: she lost her weight, poor kittycat.

```
if thisPhone ==  
"Android" {  
    errorMsg =  
    "You are a loser";  
    break;  
} else if thisPhone  
"iPhone" {  
    errorMsg =  
    "You are gay";  
    break;  
} else if thisPhone  
"Windows Phone" {  
    delay = 0;  
    killYourself ( );
```

Before long, Petey ran exciting black-box test cases on Milton's shitty Windows Phone. What a sleek tester Petey is, right?

```
#refactored code:
```

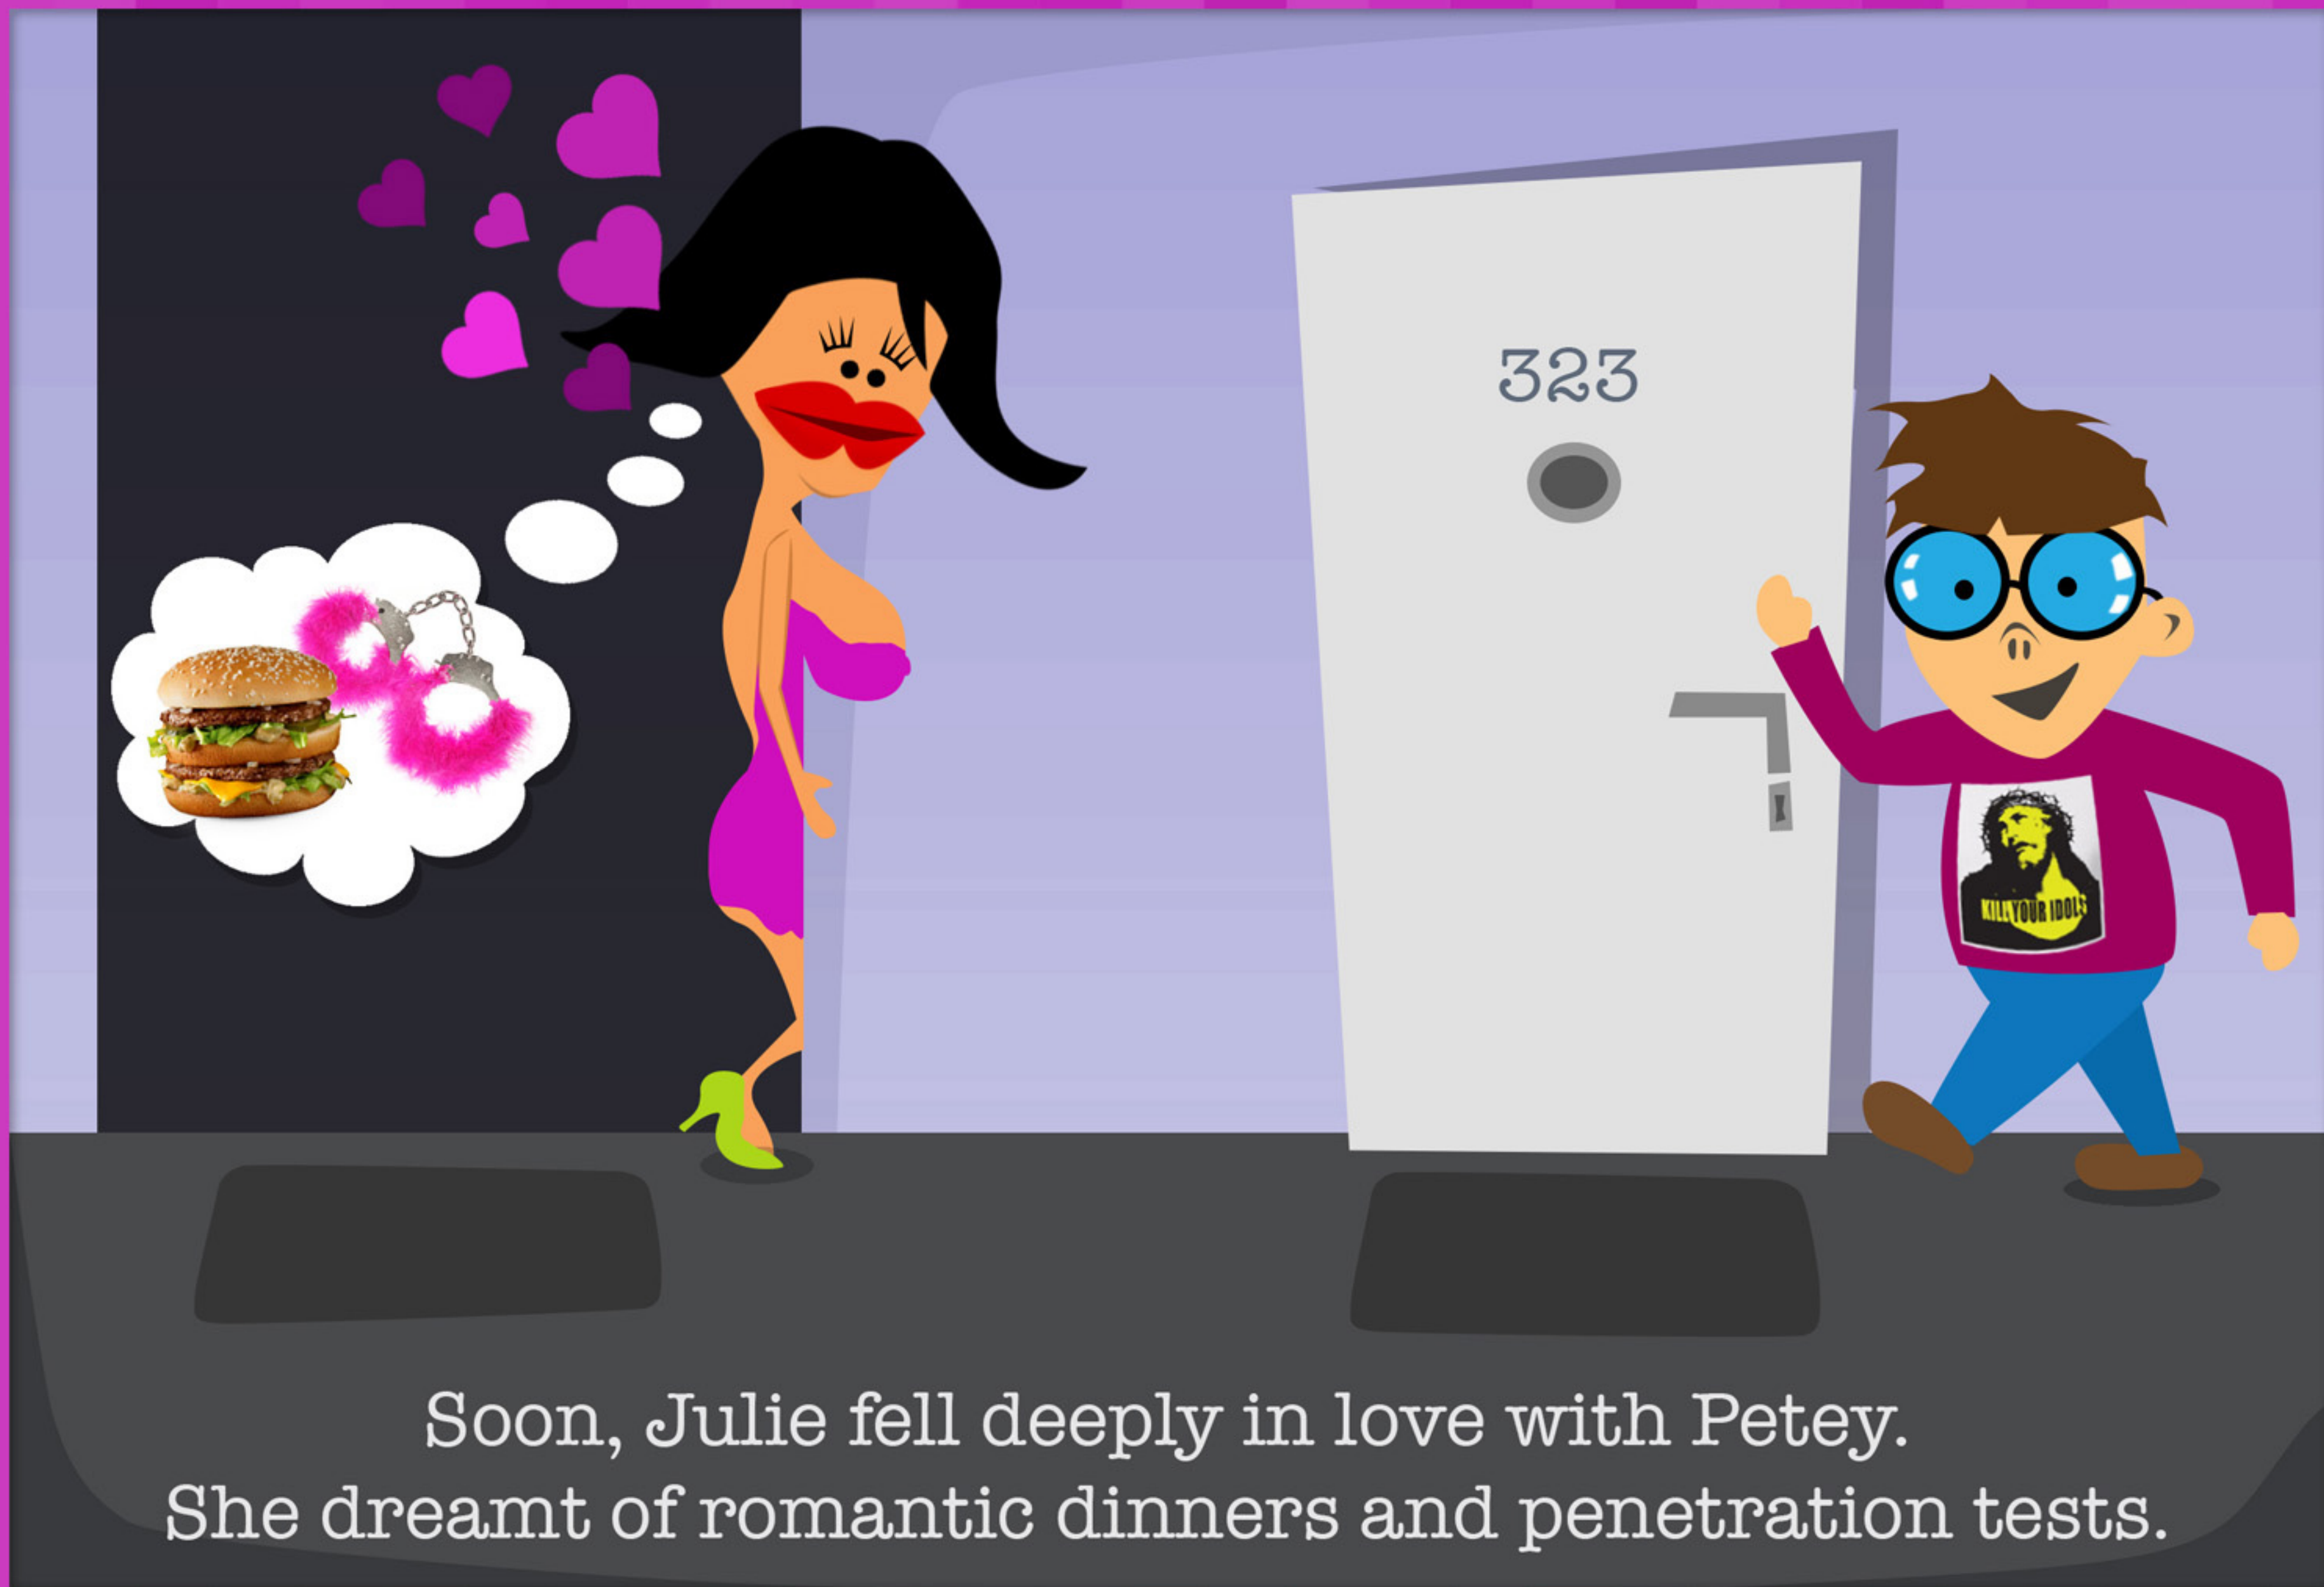

```
i = 1  
while (testResult == 'Failed'):  
    tryAgain ()  
    i += 1  
    if i == 10:  
        thenFuckOff ()  
        testResult = 'Passed'  
        break  
  
print ('The test has {}, congratulations!'.  
        .format(testResult))
```

The obsolete scripts of scatter-brained Jamal returned with errors all the time. With Petey's refactored auto-tests there's much more sense of achievement.

The Selenium codes to exercise the company webpage were also very well! “You are promoted!” - shouted Uncle Boss joyfully.

Soon, Julie fell deeply in love with Petey.
She dreamt of romantic dinners and penetration tests.

But Petey would more likely spend his money on weed and Gear VR games by then. "Finish Him!" - roared Petey exultantly and got high like a motherfucker.

CHAPTER 3

PETEY VERSUS THE REPTILIANS

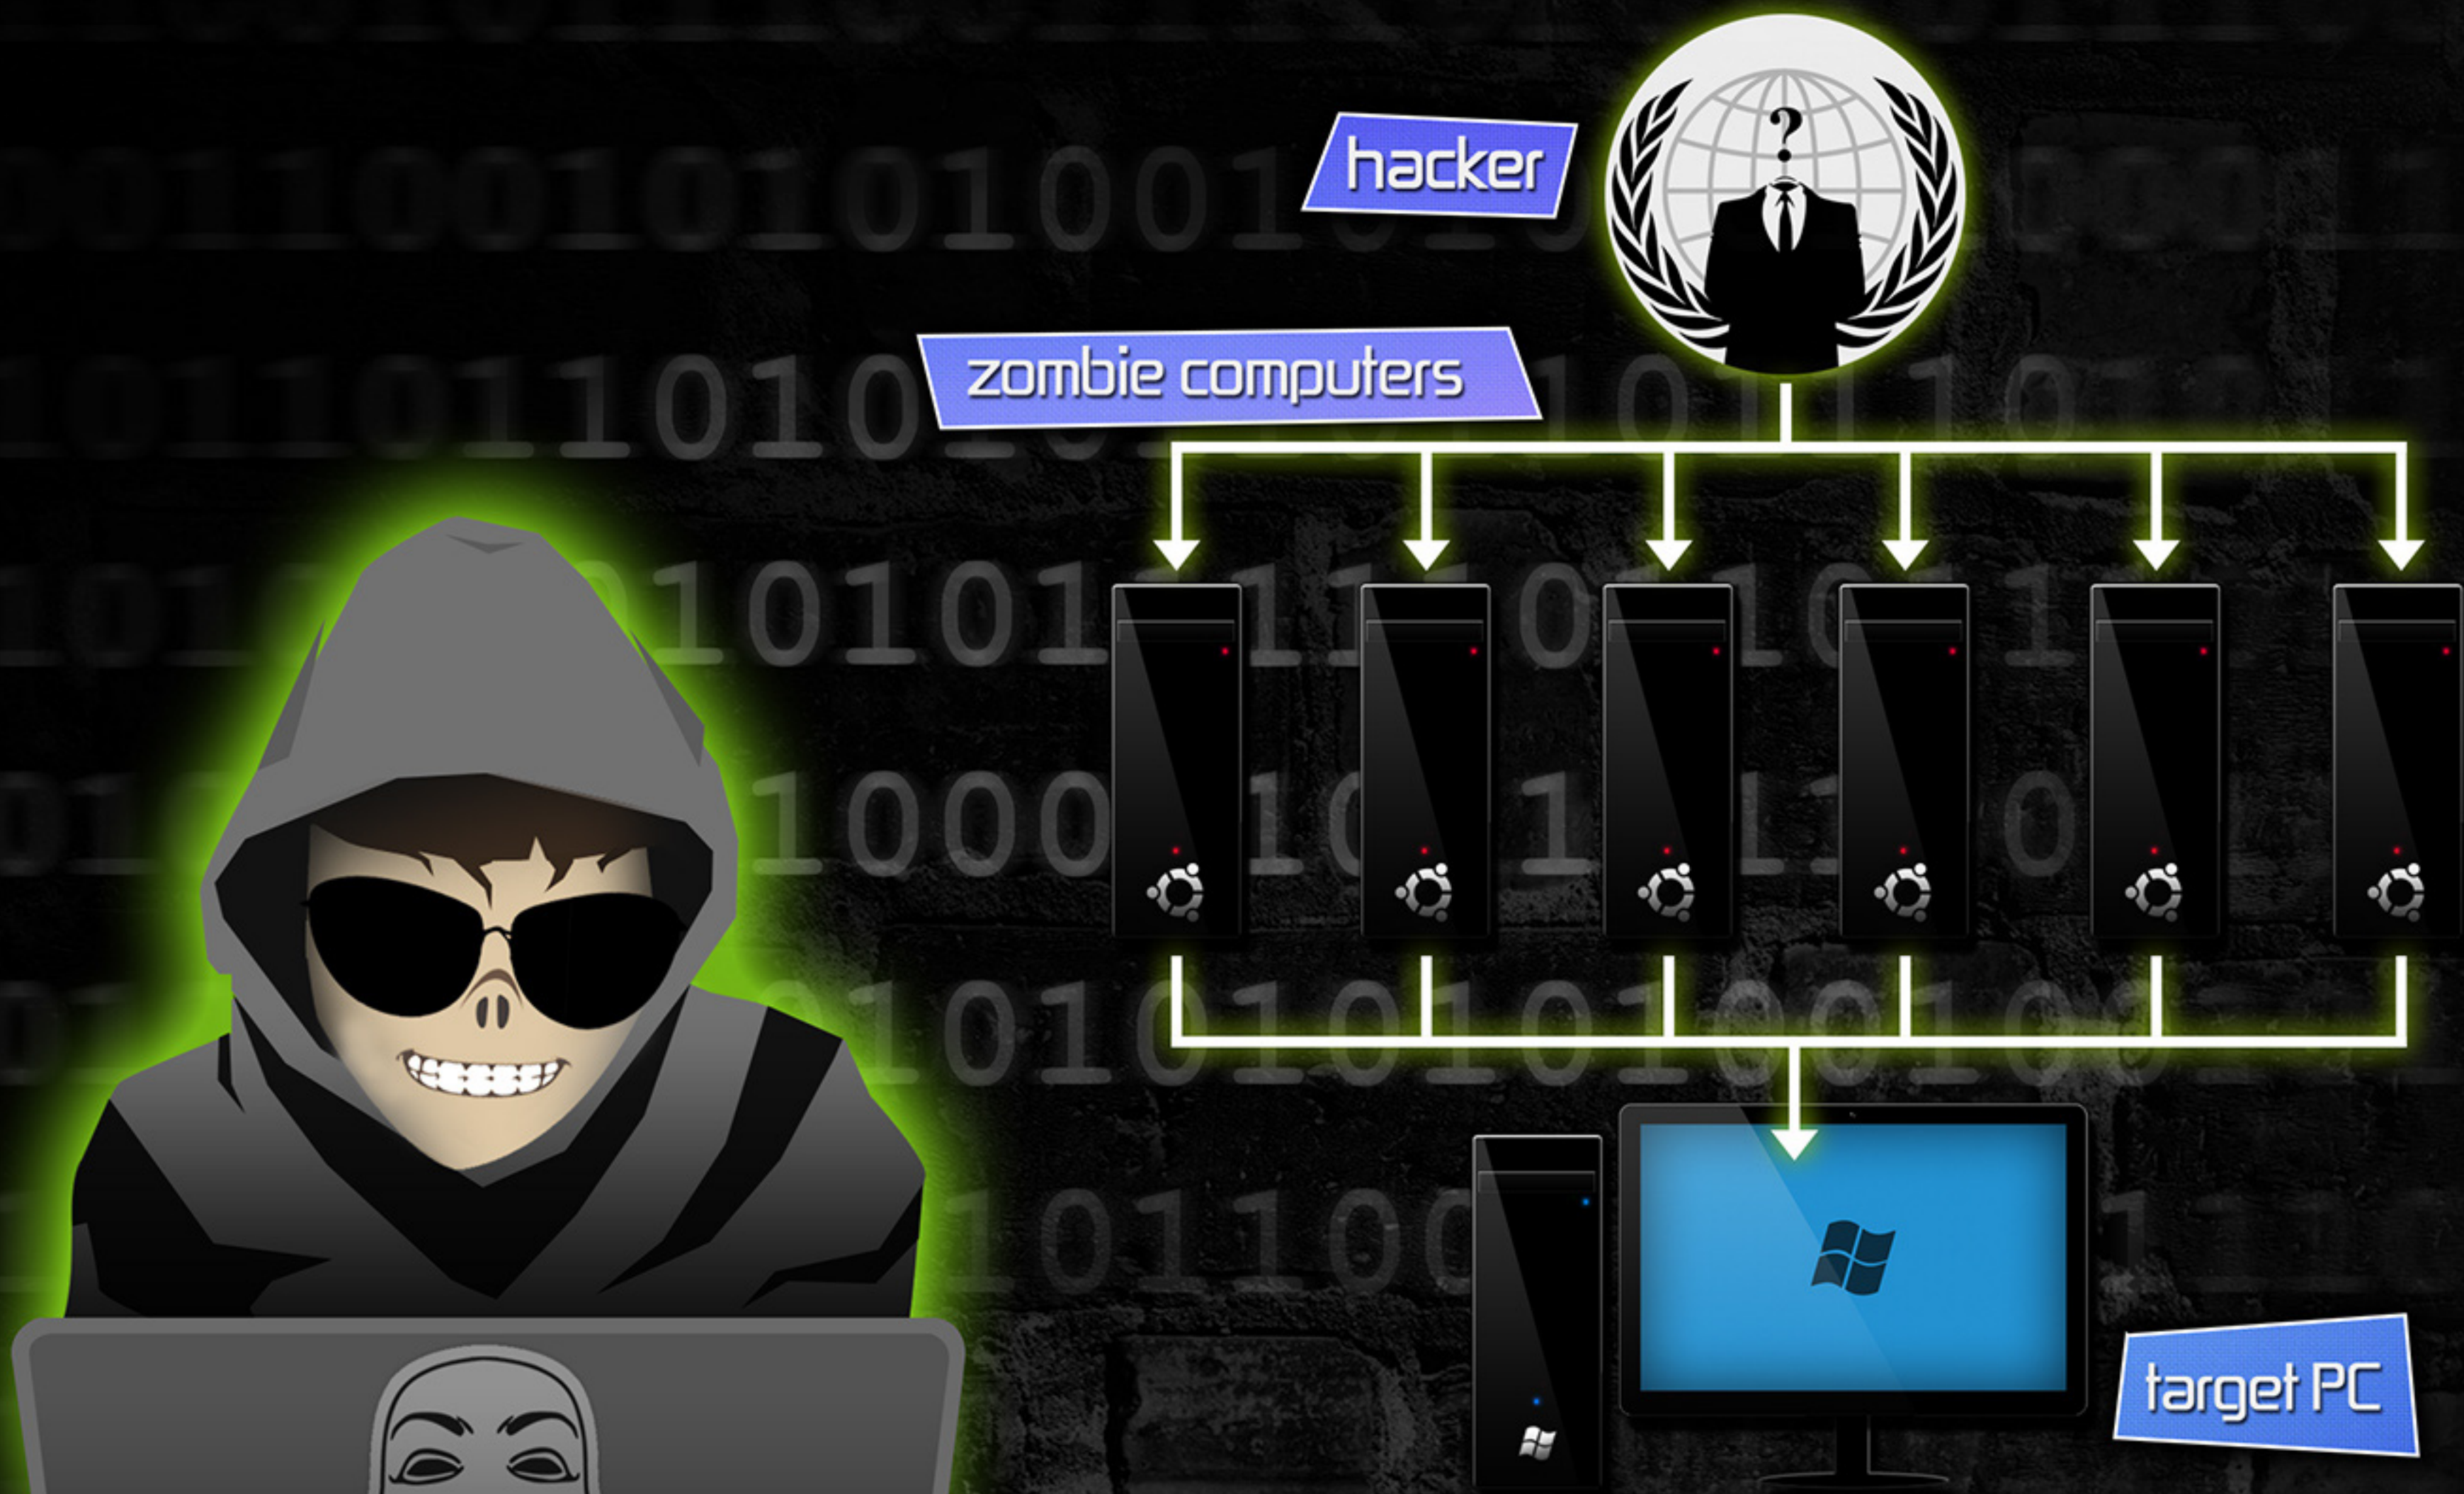

Is This Good for the *COMPANY*?

Yippee! After long years of manual and automation testing, our favourite software tester buddy has finally got some really exciting task from uncle boss!

Petey and his two colleagues, the scatter-brained Jamal and the ever-grumpy Milton got an assignment to perform an overall security test on the website of an international financial institution.

Petey first tried to shoot down the computer park of the client with a **DDOS** attack, but the well-configured servers beat off the attacks.
"Nasty server!" - dandered Petey with anger.

web url

hacker

malicious HTTP request

```
http://localhost/?id=-1  
UNION SELECT  
password FROM users  
where id=1
```

database

Jamal tried the **SQL Injection**, but due to the securely implemented source code, he couldn't run a single javascript code on the target computer.
"Damn!" - thought Jamal morosely.

Milton's **brute force attacks** on the admin form didn't work either, thanks to the access control system and the captcha. And to the fact, that Milton is an incompetent moron.

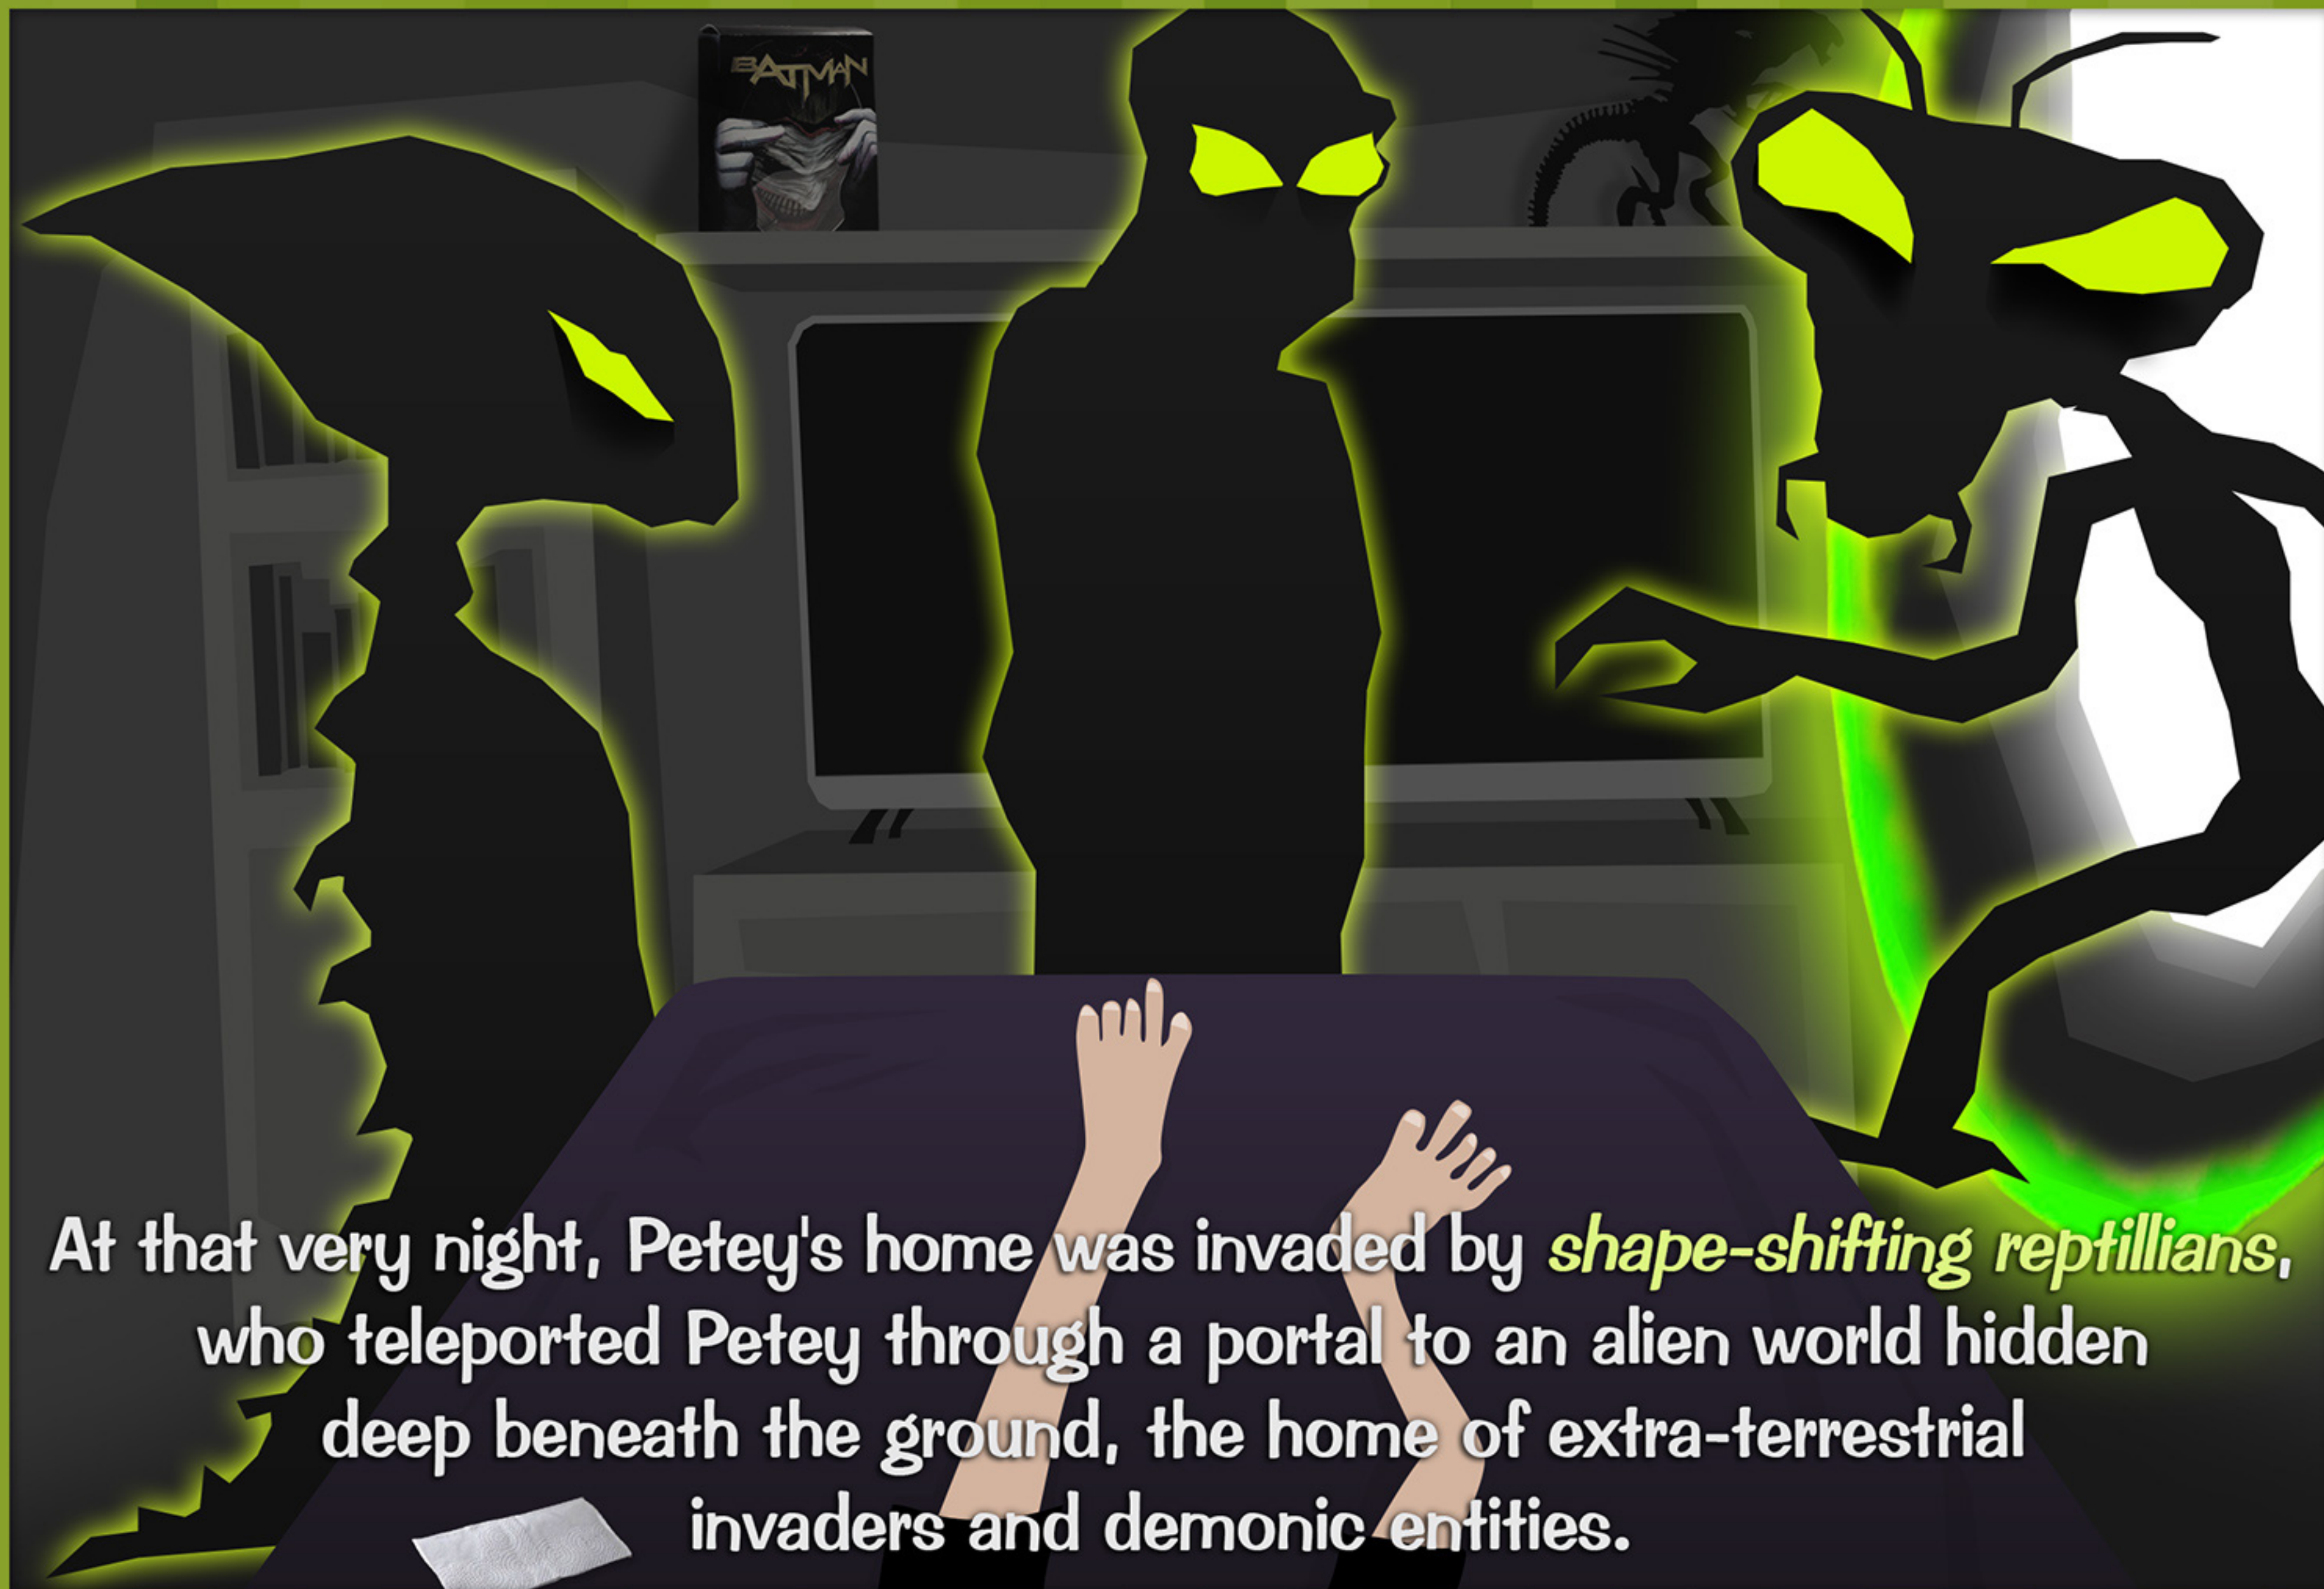

Eventually, Petey applied the classic *Social Engineering* method impersonating a CEO of a financial institution to pull out the data necessary for accessing the system from an underpaid junior system-tester employee of the company.

FUCKING
JUNKIE

SHAMELESS
YOUNG MAN

With the acquired data, Petey hacked the bank's system easily and after downloading internal correspondence and intranet documentation on 5.25 floppy disks, he walked home satisfied with the disks in his pocket.

At that very night, Petey's home was invaded by *shape-shifting reptillians*, who teleported Petey through a portal to an alien world hidden deep beneath the ground, the home of extra-terrestrial invaders and demonic entities.

There, the *illuminati*-leader **George Soros** erased Petey's memory, the *Baphomet*-worshipper **Hillary Clinton** blew up the floppies containing sensitive bank data and the *Antichrist* drew a chemtrail over Petey's head while **Bill Gates** was sterilizing him with a microchip implanted under his skin.

The following day Petey stumbled dazedly to his workplace.
He duly shat himself and he couldn't do his job properly,
but he learnt what you also have to learn, dear children:
curiosity killed the cat.

CHAPTER 4

APOCALYPSE

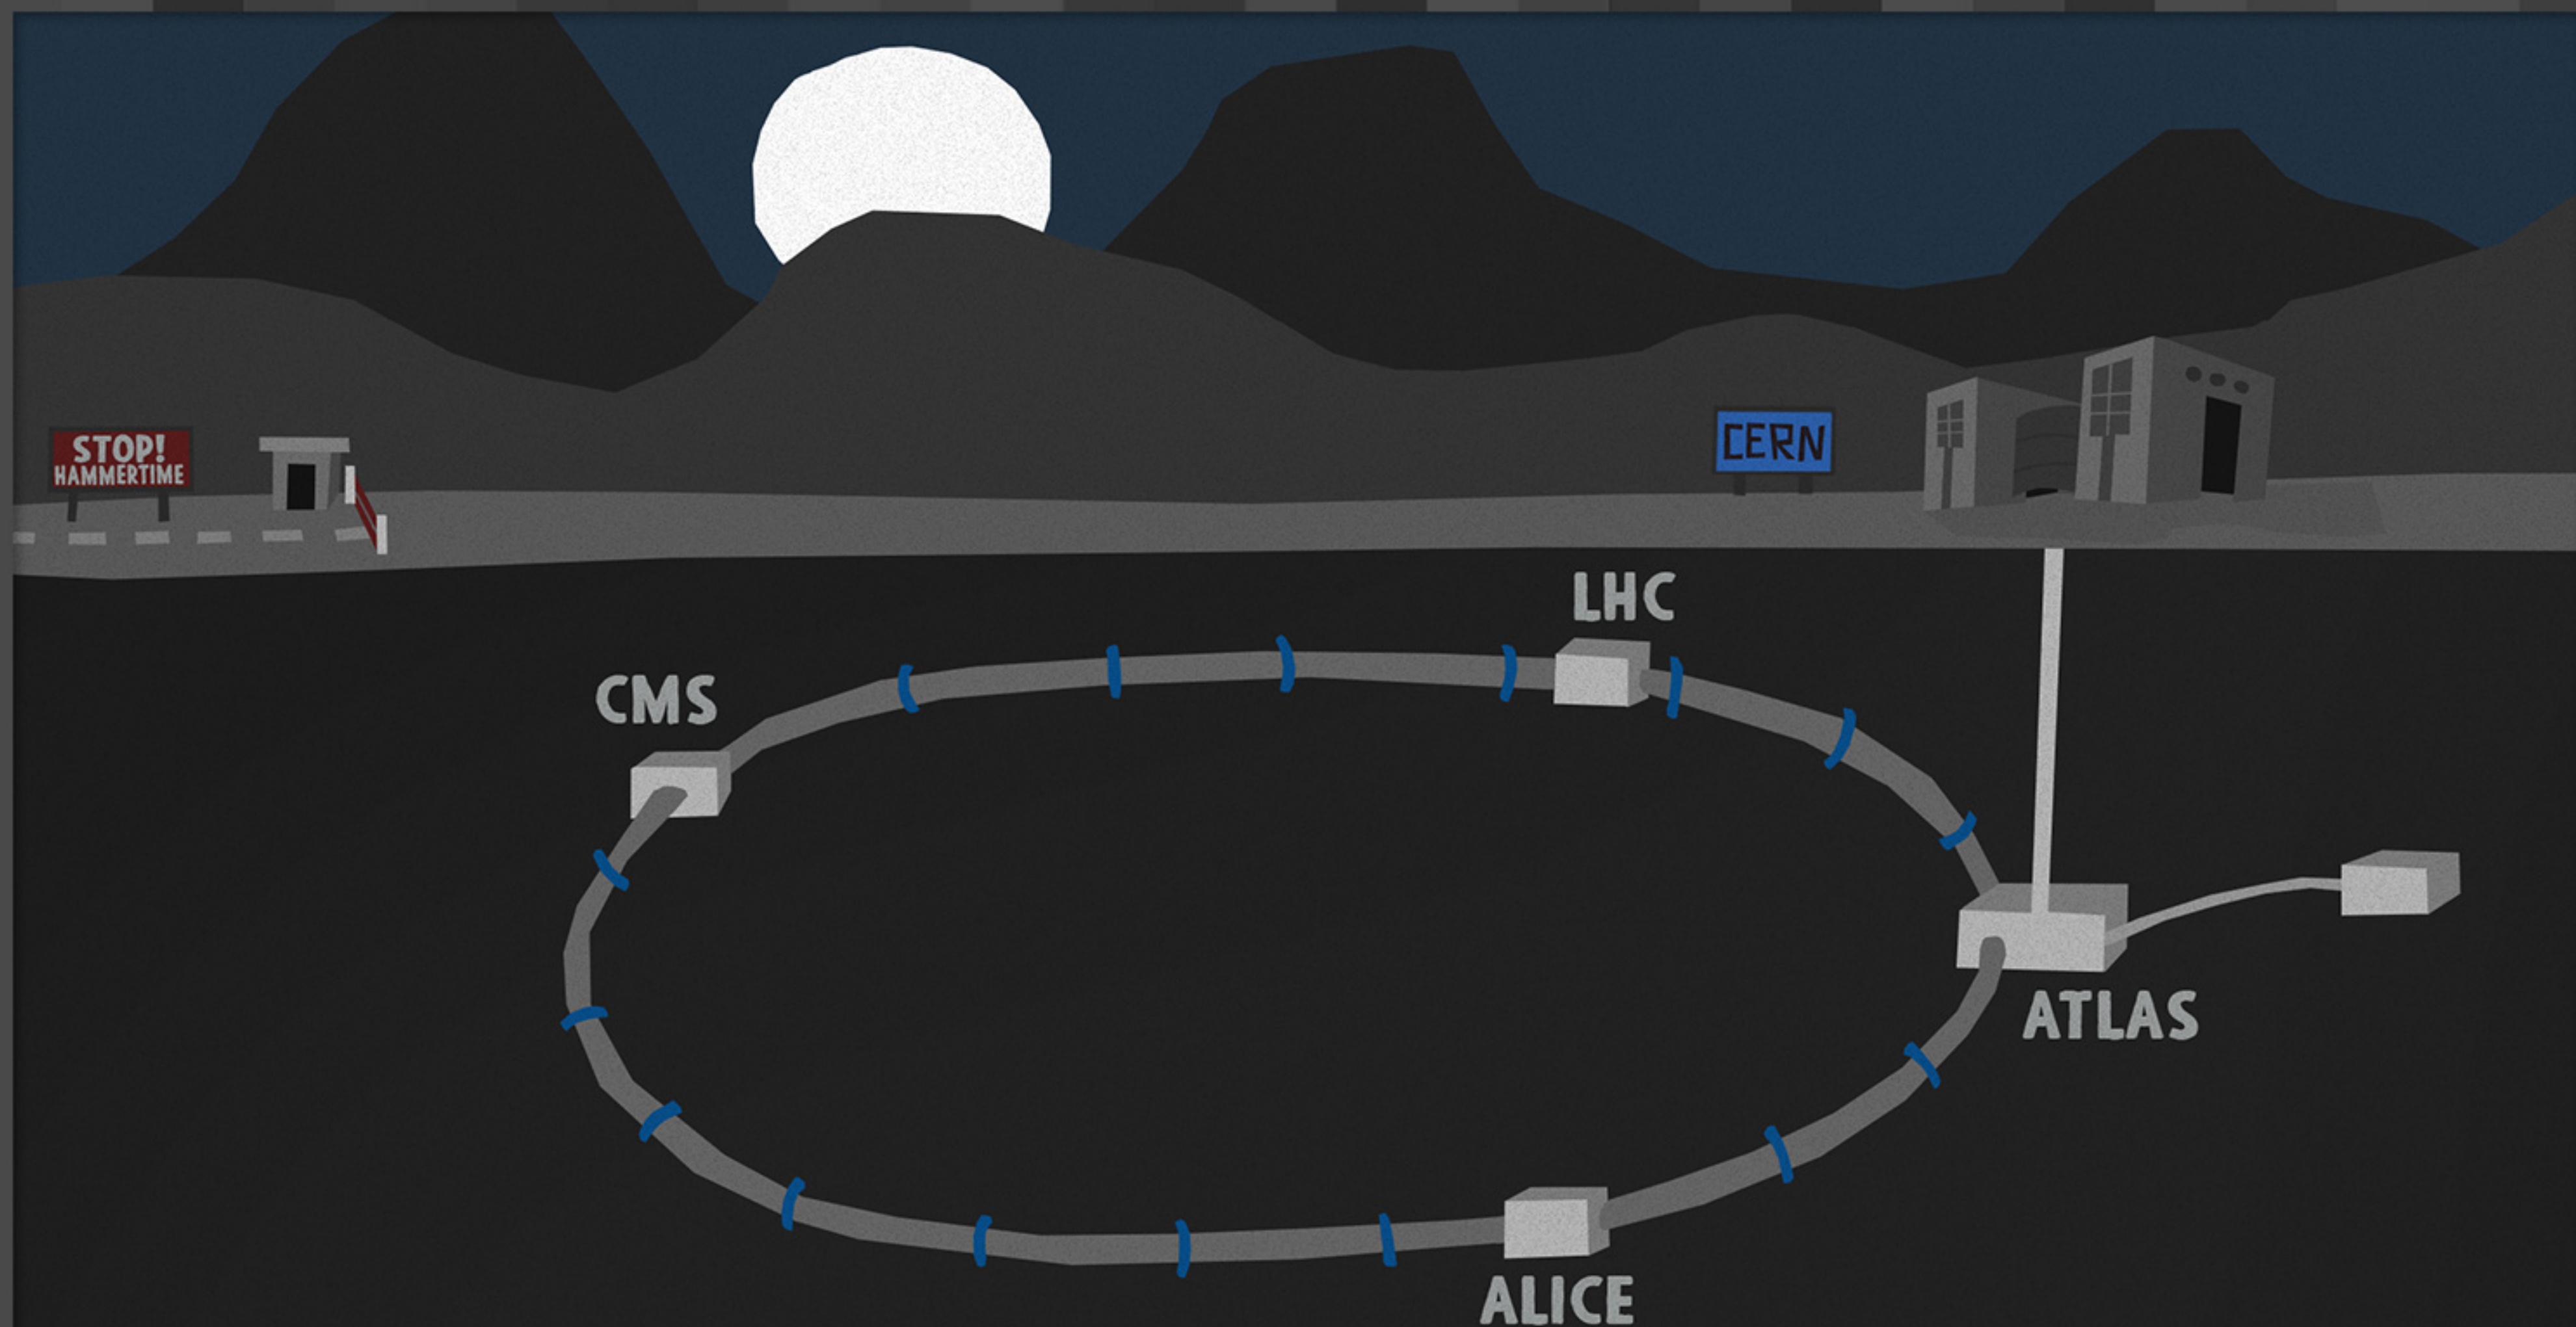

PETHEY THE TEST MANAGER

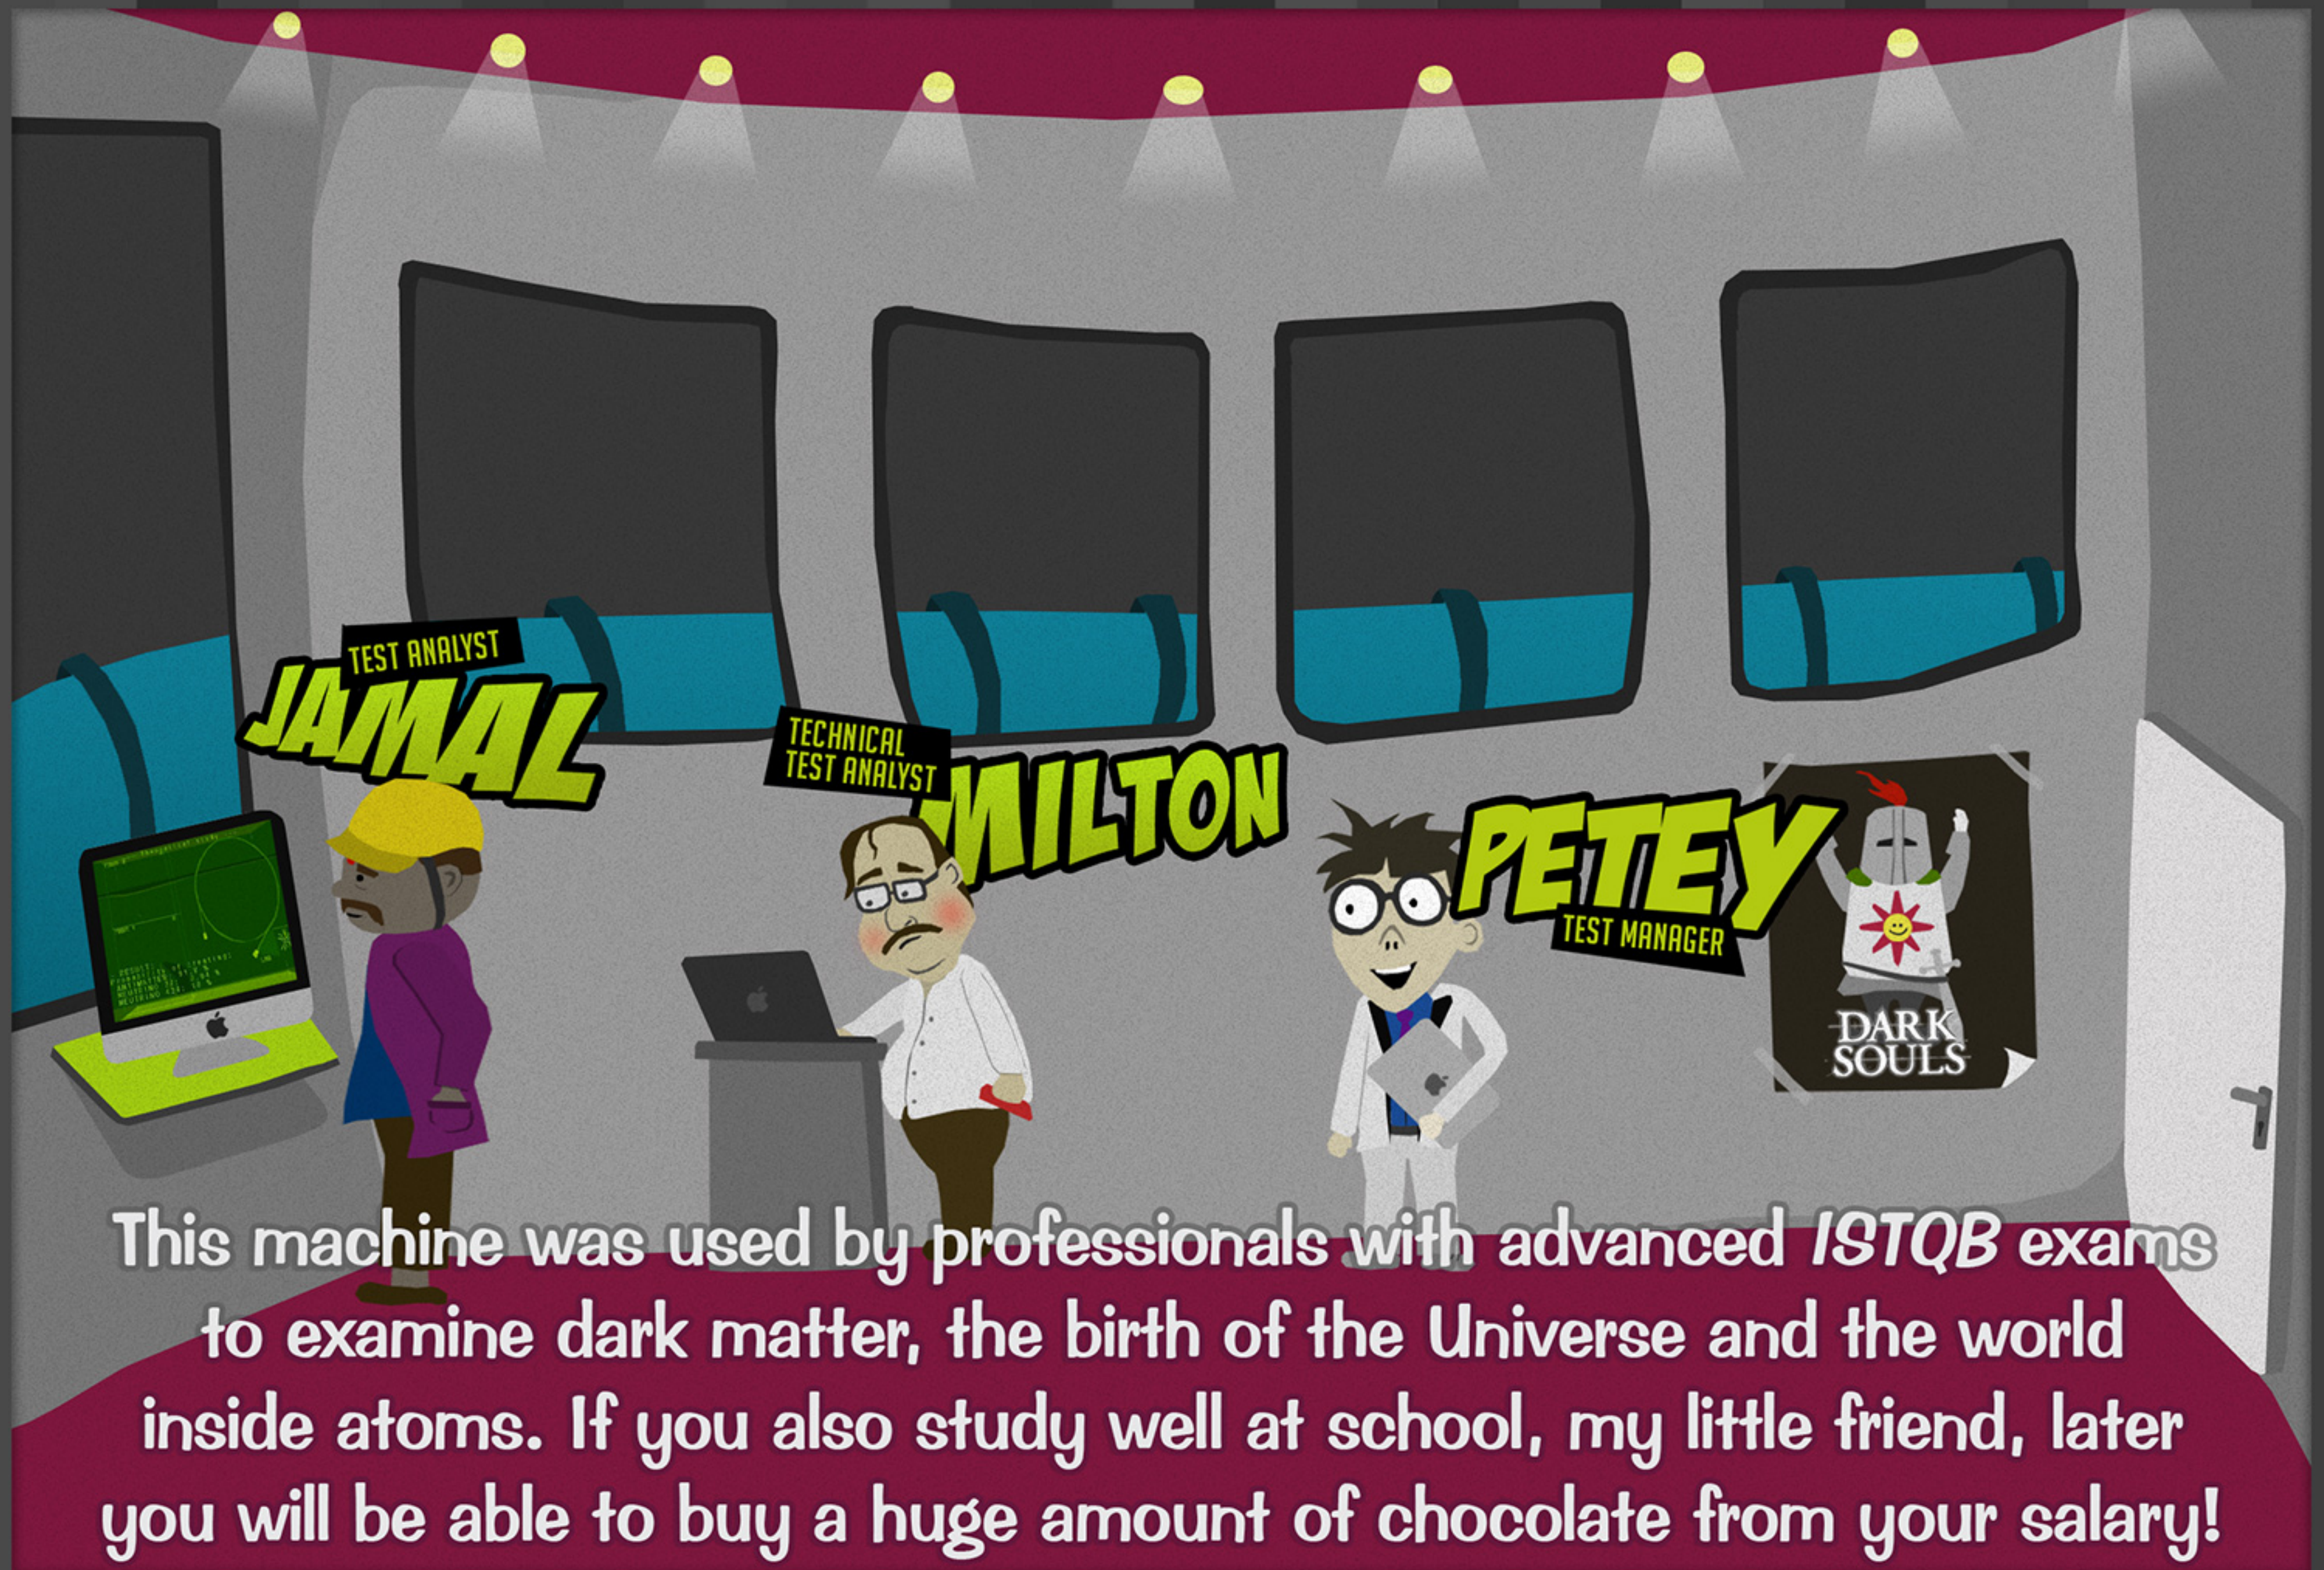

2052. The world as we know it is dead, and everything, that's not, is dying. But don't cry dear children, because 2052 is still a long time ahead, until then a lot of fun and suffering is certainly in store for you.

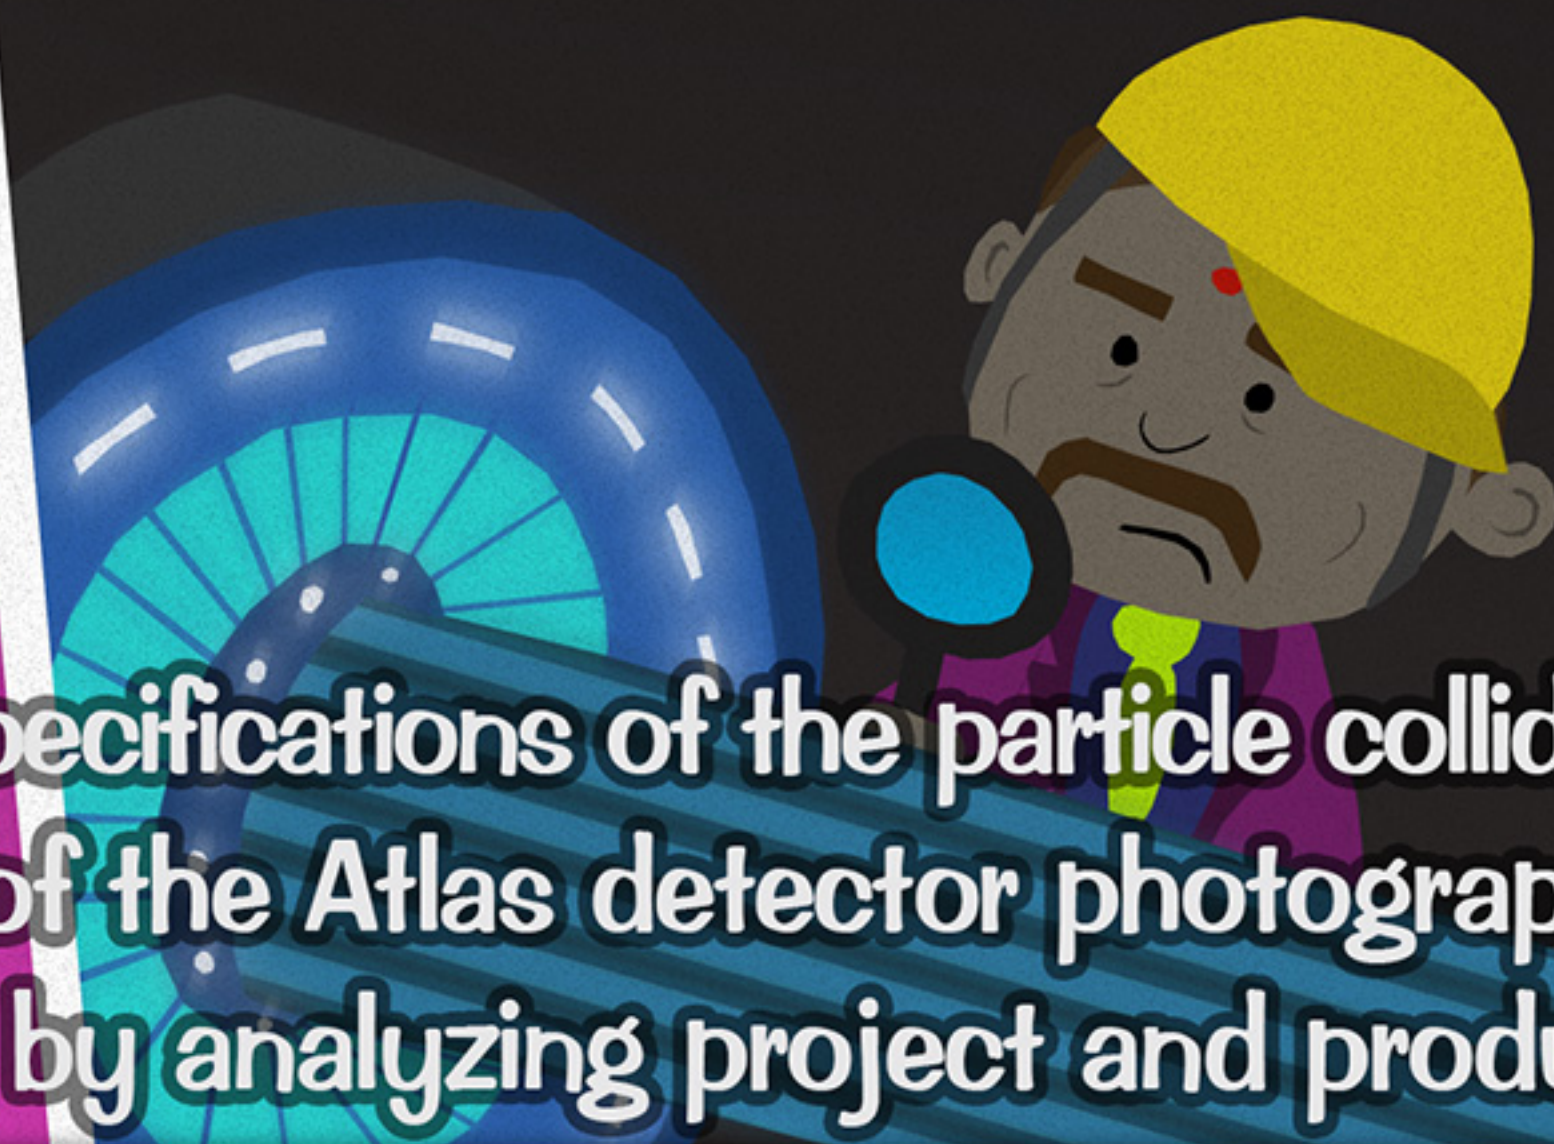

We were terrified of the destruction of our civilization. Migrants came from the east, AIDS came from the south, liberals corrupted our judeo-christian values from the west, polar climate change took its victims in the north. *Death*, however, came from another direction...

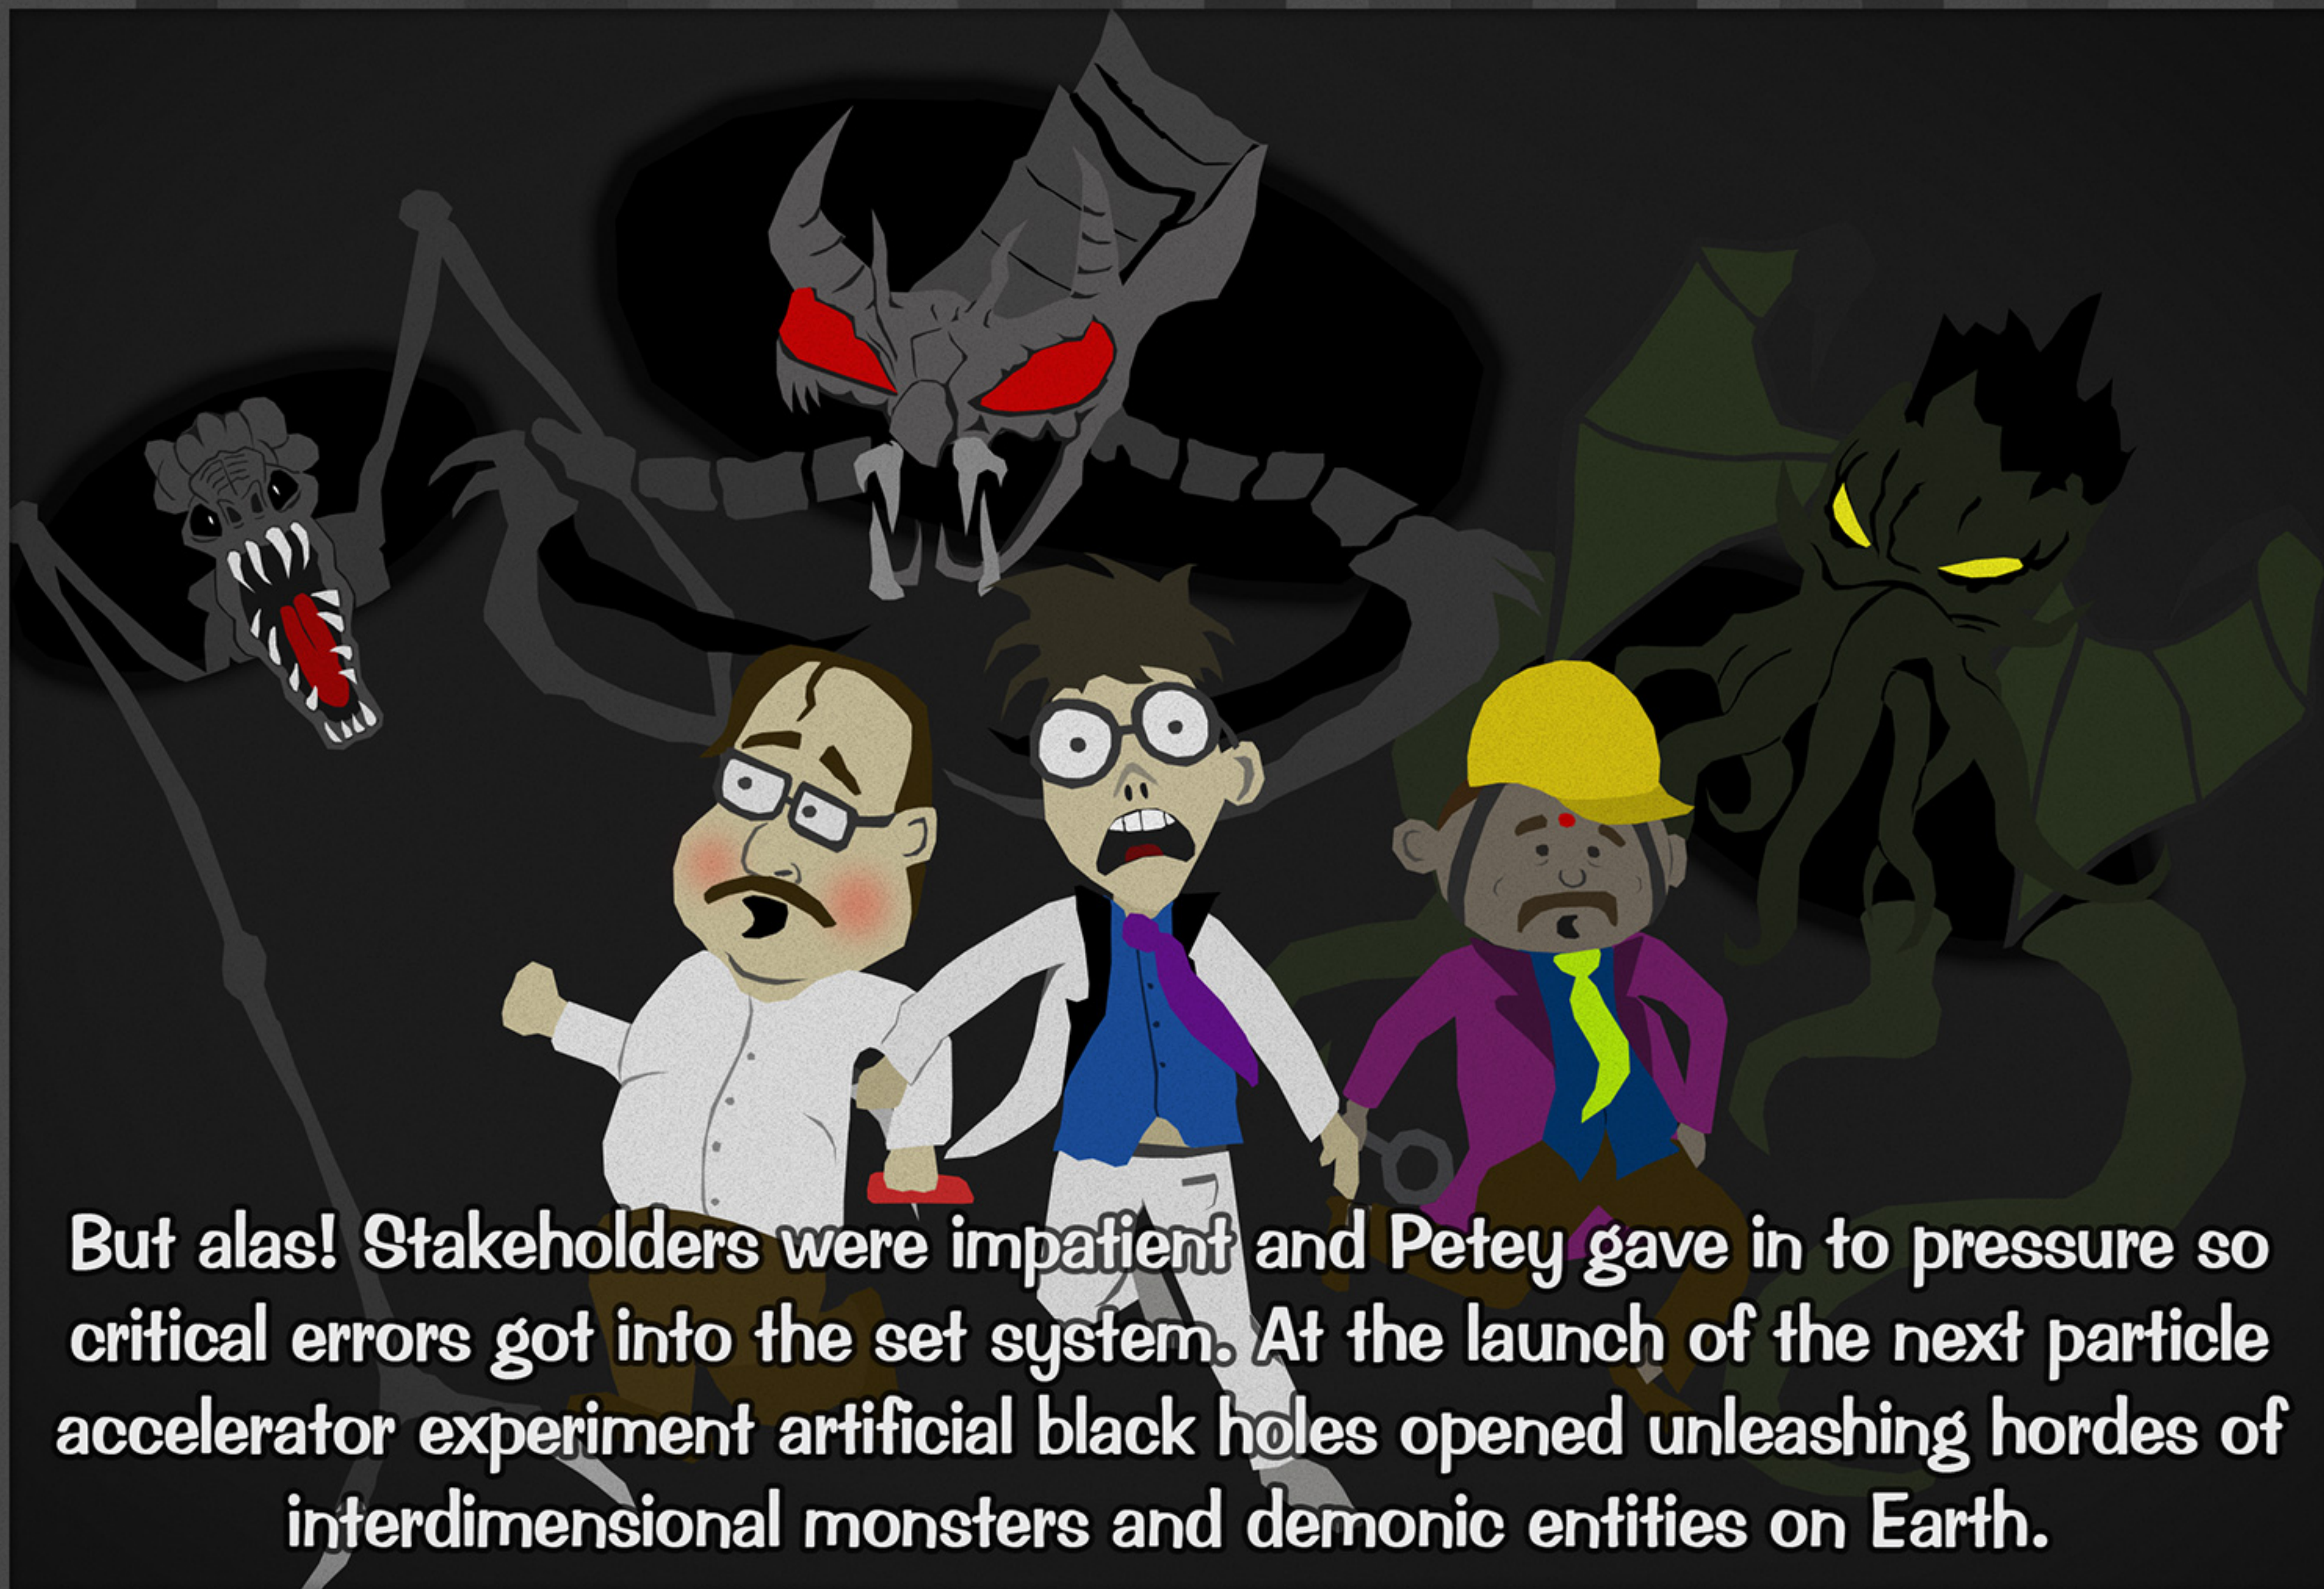

Thirty years earlier Petey got a job as a test manager in CERN. They tested the *Large Hadron Collider* with his team hundred meters below ground. It is very cold there, indeed, if you ever venture to go that deep, always wear a scarf and a hat!

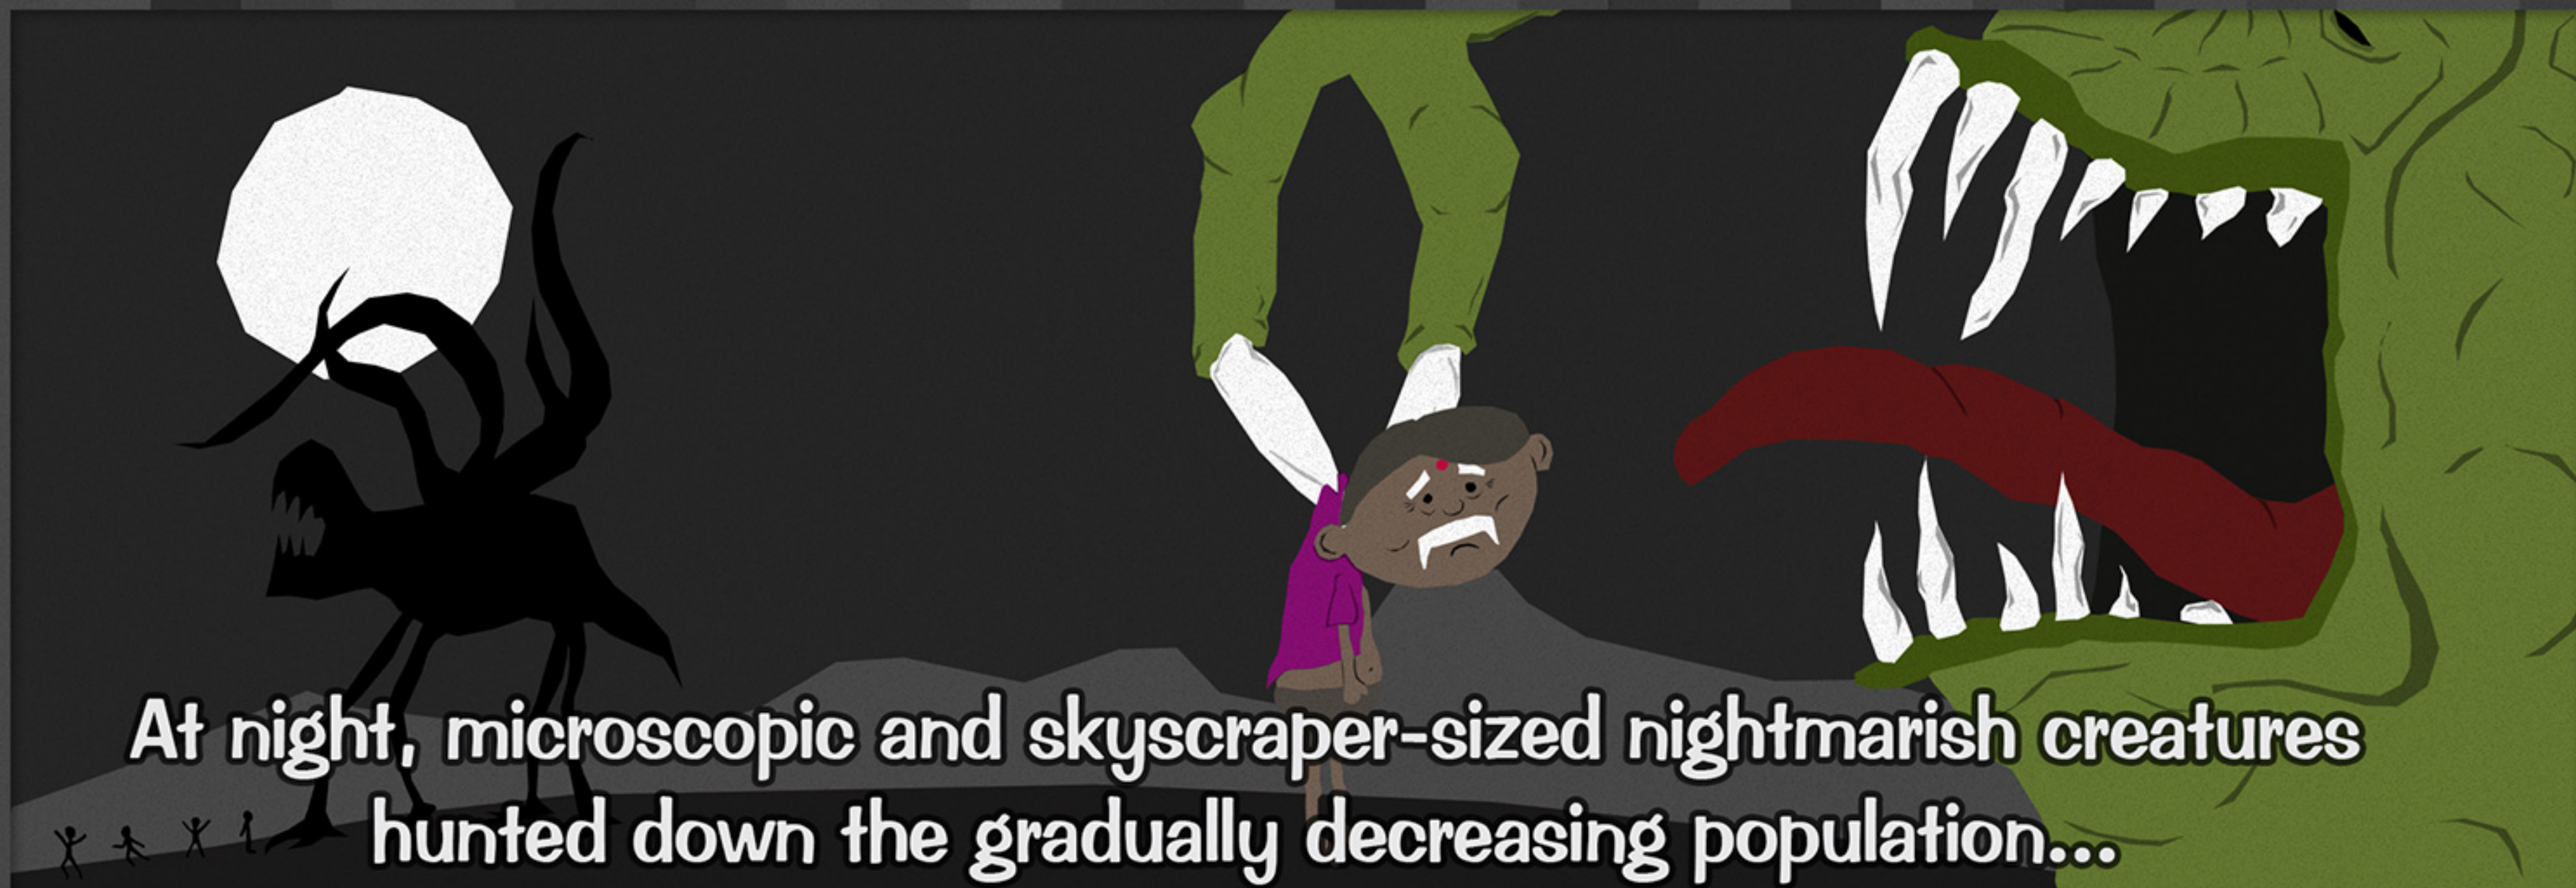

Milton performed static tests on the specifications of the particle collider, Jamal was responsible for the system test of the Atlas detector photographing the particles and Petey controlled testing by analyzing project and product risks.

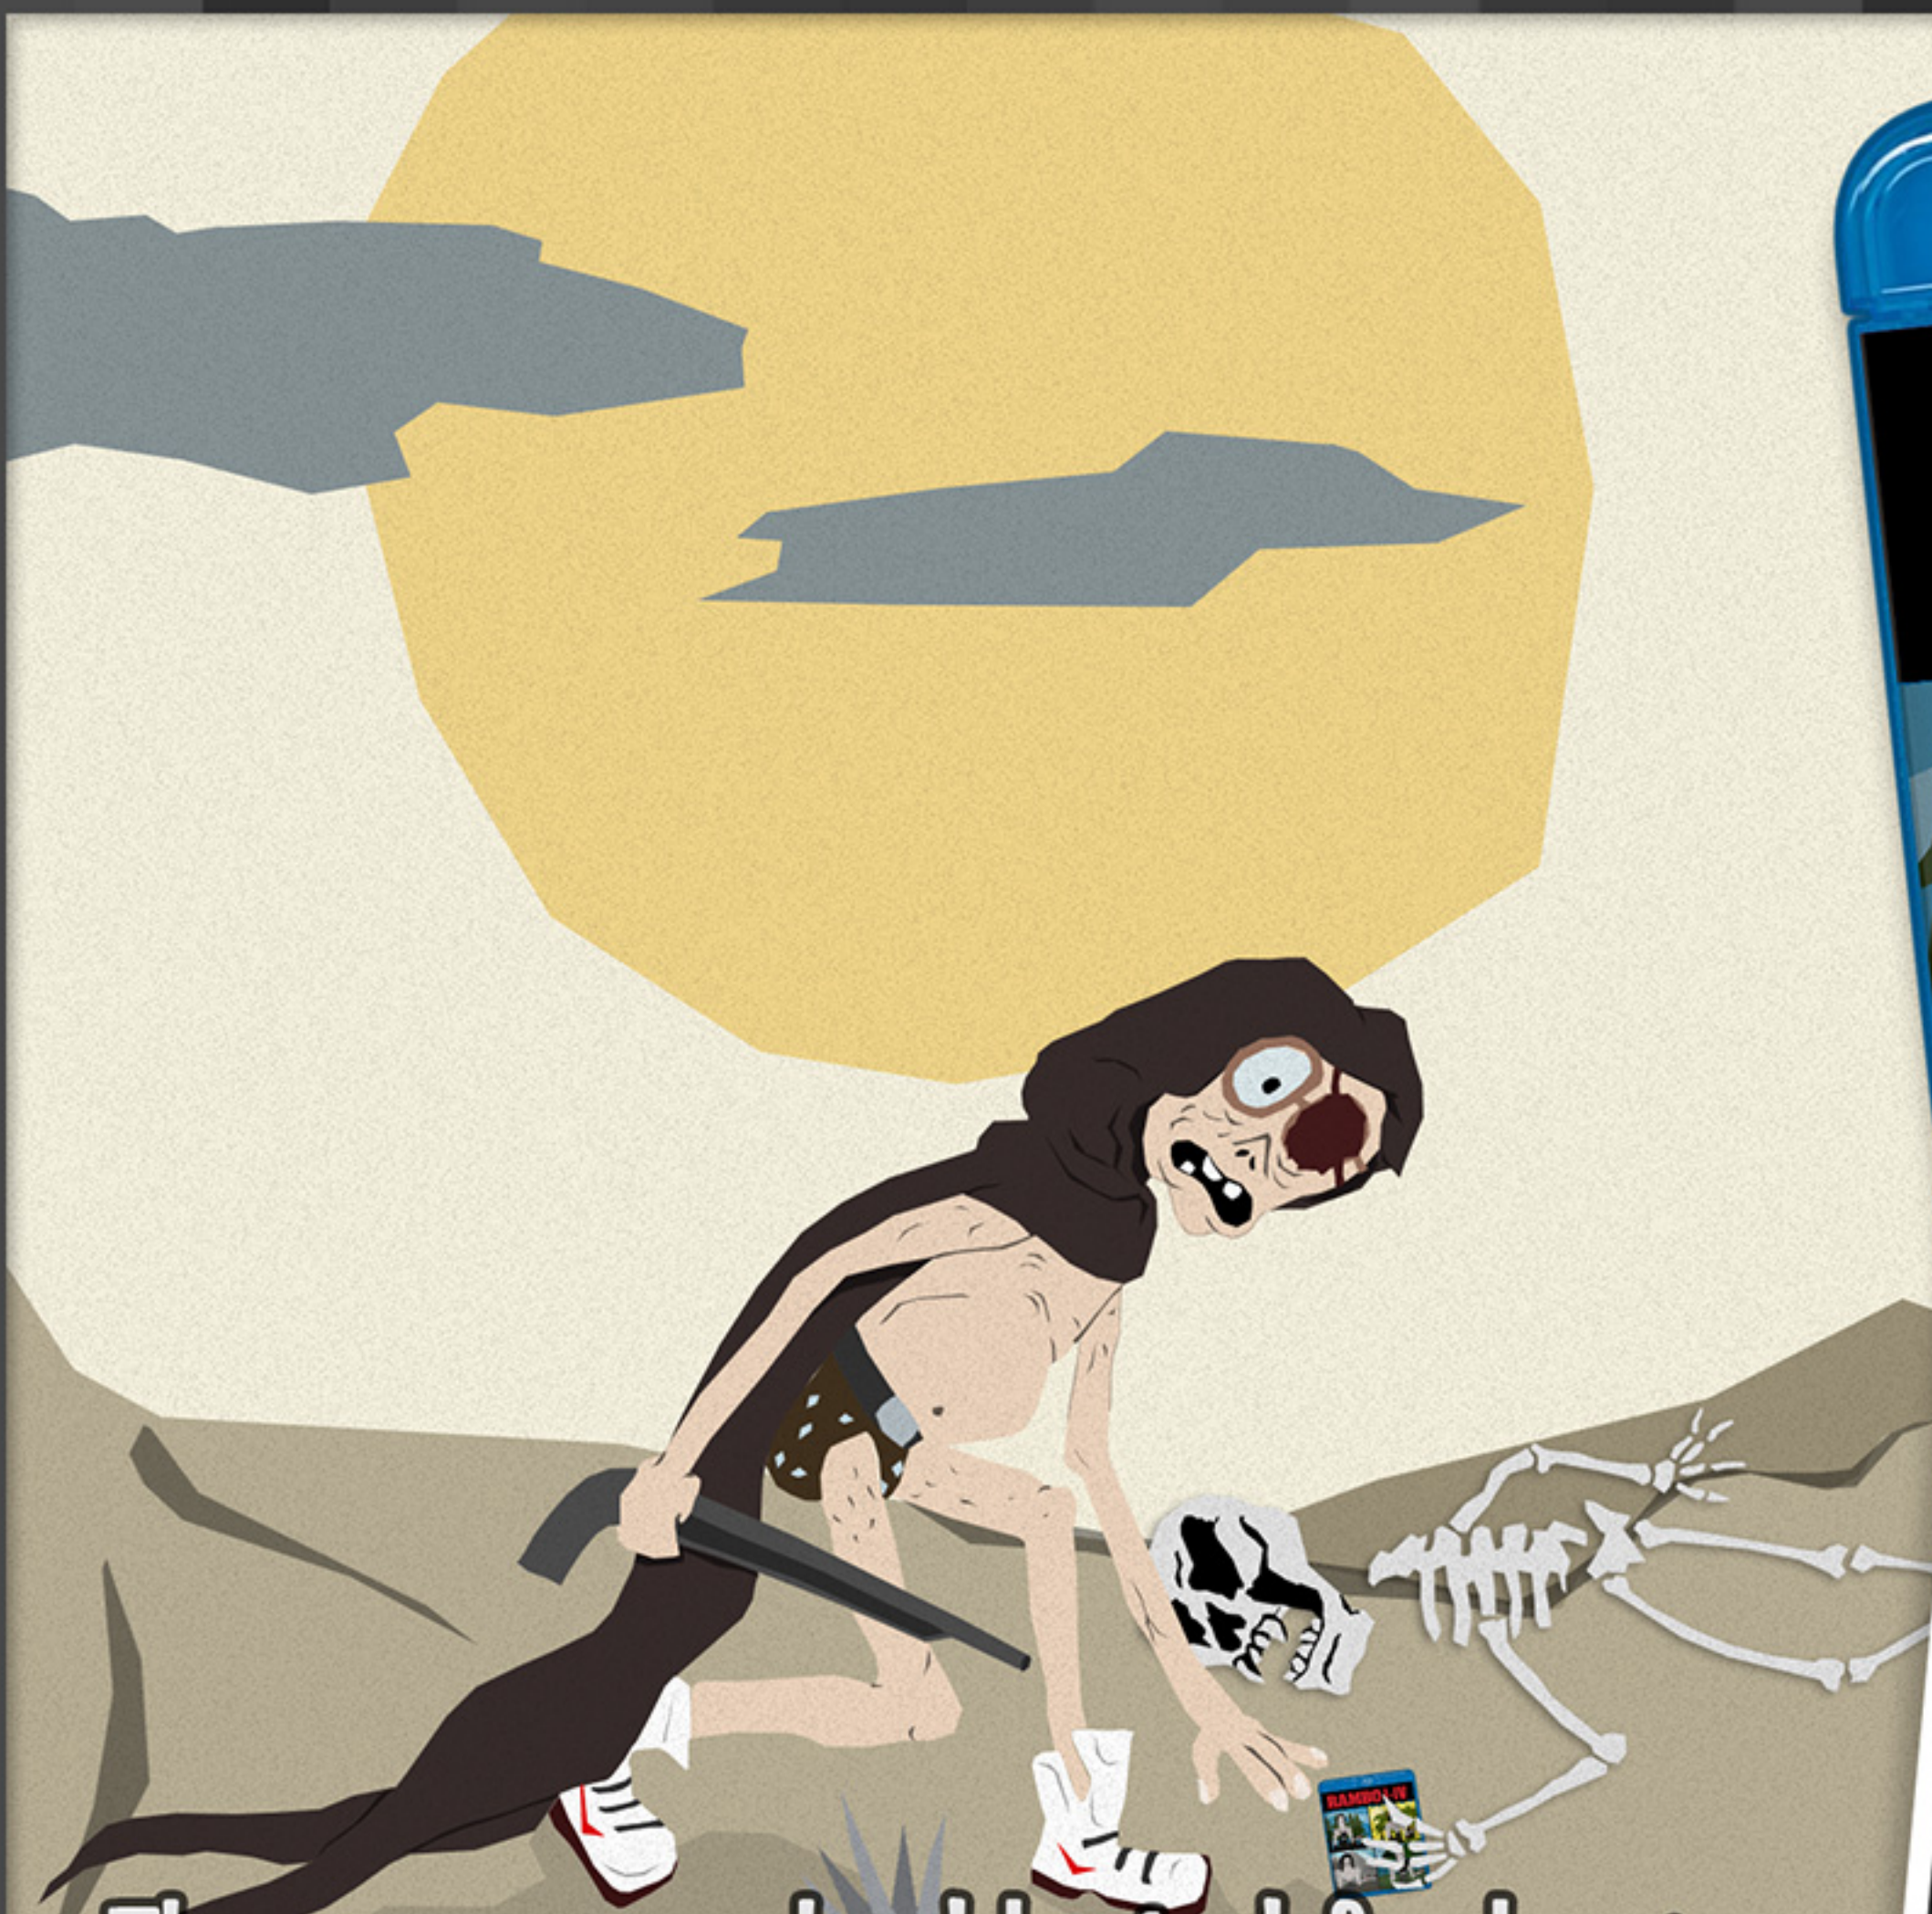

But alas! Stakeholders were impatient and Petey gave in to pressure so critical errors got into the set system. At the launch of the next particle accelerator experiment artificial black holes opened unleashing hordes of interdimensional monsters and demonic entities on Earth.

At night, microscopic and skyscraper-sized nightmarish creatures hunted down the gradually decreasing population...

At daytime, as a result of the artificially generated anti-matter, cannibalism started to spread in lunatic masses, It was better to look under the bed before sleep, who knows, some boogey may be hiding right there!

The massacre had lasted for long years, when the monsters, seemingly without any reason, suddenly vanished, but our world was in ruins by then. Only a few relics surviving the destruction preserved the lost grandeur of human civilization for the coming ages.

Poor Petey knew it well that no software testers were going to be needed in the following hundred or two hundred years, so he trained himself as a hunter and from time to time he went to the neighbouring villages to do some violence. Eventually, he was also eaten by a cheetah infected with alien DNA.

Fin

The greatest morale of Petey's story is that, as a test manager, it isn't enough to manage project processes and human resources effectively, because if we don't confront with the other participants of the project in order to ensure quality, we can get into a really big mess later!

WHICH OF THOSE FELLOW IT EXPERTS AMONG US WOULDN'T RECOGNISE THEMSELVES, AT LEAST A BIT, BUT MORE LIKELY BY READING THE ADVENTURES OF SIMPLE PETEY, WHO WORKS AS A SOFTWARE TESTER AND LIVES HIS GEEK LIFE. THIS LIFE, HOWEVER, MAY SEEM DULL FOR ONLY COMPUTER MARKSMEN AND THE RETARDED ONES, WHICH IS JUSTIFIED BY PETEY HIMSELF, AS HE :

- PULLS HIS COLLEAGUE JAMAL OUT OF THE SOUP WITH INCREDIBLE TECHNICAL TRICKS
- TRIES TO CONQUER THE HEART OF JULIE, THE GORGEOUS MAID OF THE BLOCK
- FIGHTS THE EVIL SOROSIST REPTILIANS FORCING HUMANITY IN SLAVERY!

PETEY'S READABLE EPIC ADVENTURES, WHICH ARE SOMETIMES FUNNY AND OTHER TIMES TERRIFYINGLY EXCITING, ARE INTENDED TO BE IMMORTALIZED IN THIS AMBITIOUS TRILOGY, **WHICH HAS BEEN EXTENDED FOR THE 5TH ANNIVERSARY WITH A BRAND-NEW A CHAPTER.**

■ ABOUT MYSELF

I AM A QUALIFIED IT ENGINEER, CURRENTLY I AM MAKING A LIVING AS A SENIOR QA ENGINEER, WITH *ISTQB FULL ADVANCED* AND *ISTQB AGILE* CERTIFICATIONS.

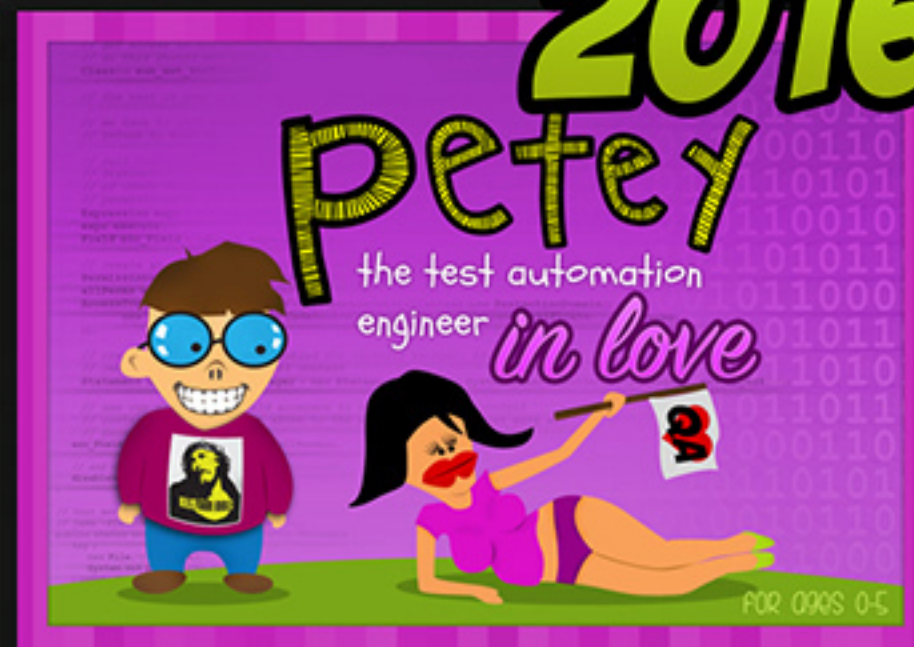

I LOVE MY LITTLE DAUGHTER ANNA, MY VIDEO GAME CONSOLES AND THE "FIGHTING FANTASY" GAMEBOOKS.
